Tags of the week ...

- BR v3r0907p1 (tag, not a release)
  - commonRootData v2r8 (of EM, extra methods in AcdId)
  - AnalysisNtuple v2r15p1
  - beamtest v5r1p5
- BR v3r0907p2 (tag)
  - removed:
    - AncillaryEvent
  - added:
    - AdfEvent v0
    - AdfReader v0r0
    - AncillaryDataEvent v0
    - AncillaryDataRecon v0
    - AncillaryDataUtil v0r0
  - updated tags:
    - G4Generator v5r14 (BeamTransform)
    - Trigger v4r8 (tkr diag code disabled)
    - beamtest06 v5r1p6

LAT Ground Software Telecon   **Michael Kuss**

... whatever you want!

???

Remember: it is the responsibility of the release manager (the human, not the ReleaseManager) to build a release suitable for a task!

But: you have to request it! I am not extremely formal, so this should not be an obstacle.

Simulation Pipeline

https://confluence.slac.stanford.edu/display/BeamTest/Monte+Carlo+Production+Log

SPS runs BeamTest-0031 – BeamTest-0066

BR v2r0903p0 + beamtest06 v5r1p5

PS runs BeamTest-0068 – BeamTest-0106

BR v2r0903p0 + beamtest06 v5r1p8 + G4Generator v5r14

Michael Kuss

Analysis Pipeline

Exercise data transfer from INFN Pisa (CERN) to SLAC, with injection into the pipeline.

Data taking: need to take data with all relevant info in the rcReport.out and rs[ab]*.xml

INFNPI cron job: currently replaced by human, who copied 330000832.tar.gz to SLAC

SLAC: Warren set up a set of pipeline scripts. News are 330000832 was processed!

- Ancillary package set: Heather wipes over the packages and implements the methods in the root packages

- Joanne works on calibUtil (split of ancillary dtd file)

- socket connection of Online to Gleam (Heather will return to it)

- G4 vis libs for Linux (Franz, Navid) and windows (Riccardo)

- Eric will fix the ACD for BR
