

# GASP-WEBT MW data

from mid 2007 until now (and hist. WEBT data since 1997)

- Radio-mm data (5, 8, 14.5, 43, 230, 345 GHz) from UMRAO, Noto, and SMA.
- JHK data from C. Imperatore
- R-band I.c. (see plot)
- Few BVI data
- Cross-correlation (DCF) analysis among various frequencies (in particular gamma-optical).
- Broad-band SED construction.
- If we find the time, we'll prepare a GASP letter on this exceptional event; in any case we'll participate in the MW paper. GASP co-authors may be 15-20, depending also on the time interval considered.
