Task Run Summary

If you were authorized to do so, you would be able to create runs for your Tasks.

16 items found, displaying all items.
1

Name	Done	Failed	Running	Waiting	Finalizing
configReport-v3r0p0	7	0	0	0	0
configReport-v3r1p0	2	0	0	0	0
demodev	22	0	0	1	0

Clicking this should bring up Run Display (Processing View) for this task filtered by RunStatus = done (other columns by appropriate status)

Processing View (Run/TP-Status)

TaskProcessName RunName	SimRecon	Digi	...	Analysis
0001	Success	Submitted		
0002	Success	Scheduled		
0023	Success	Pending		
0023	Success	Running		
⋮			⋮	
9999	Success	Success		Failed

Processing View Requests

- Auto update of page
 - 30/60s?
 - User Selectable?
 - By time limit as above, or after 'N' events changing state of watched data -- whichever is sooner?
- Filtering by:
 - RunStatus (as opposed to the active TP's status)
 - If not filtered by RunStatus, a column displaying the RunStatus should be included
 - RunName (regexp or similar)
 - Date Range (maybe by requiring {first TP, last TP, all TPs} inside range)
 - Must be maintained between auto-refreshes
 - Combinations of the above using 'logical-and' (I see no benefit to bothering with 'or')
- HotSpots (Drill-Down Entrypoints):
 - RunName (Row Title) → Run Log File (Doesn't Exist yet)
 - TaskProcessName (Column Title) → TaskRun Summary (for TP, filtered on same criteria)
 - TP Statuses (Interior Cells) → Logfile for TPI, if available
