pipeline update 20060125

I've made the changes you requested to the test pipeline and checked them in to CVS after testing. DPF/PDB v1r2p1 is the tag. I would like permission to announce a PROD outage while I upgrade the code running on that server.

The changes affected two files:

DPF/PDB/lsfCallback.pl (CVS v1.5):
    Added command line args to allow stderr/stdout redirection logfiles to be passed in.

DPF/PDB/DPFScheduler.pl (CVS v1.23):
    Added stderr/stdout logfile names to command line args passed into lsfCallback.pl
    These log files are now placed in the same location as the lsf log files for each task process.

Tony Johnson has upgraded PFE-Test to work with the new logfile locations.
