

# Suzaku Proposals

Please post suggested or submitted proposals here.

## Suzaku Cycle 1

Suzaku proposal for PKS 1510-089 and BL Lac. The [proposal](#) for the observation, whose principal investigator is Greg Madejski, was submitted on Jan. 6, 2006. The submission form is [here](#).

## Suzaku Cycle 2 proposals

Two proposals on behalf of the AGN group were submitted on Dec. 1, 2006. The requested period is January 15- April 1, 2008.

- One ToO [proposal](#) on two flaring blazars among BL Lac, PKS 0735+178, PKS 0537-441, AO 0235+164, 0716+714
- and [another one](#) on PKS 0528+134.

From Benoit Lott:

Two other joint Suzaku-GLAST proposals were submitted by Glast affiliated scientists, Jun Kataoka and Tad Takahashi:

- one on 3C279, PKS208-512, PKS0528+134, 1622-297, 3C454.3;
- another one with "VERITAS trig" on Mrk421, Mrk501, 1ES1969+650, 1ES1426+428.

Another proposal, led by Prof. Fukazawa, was submitted for simultaneous observations of microquasar LSI +61 303. It was submitted directly to the Japanese program, so it is in Japanese. Dave Thompson contacted MAGIC and VERITAS. They cannot observe this source in the Spring, which is what we would need to stay within Suzaku Cycle 2. Dave has also contacted radio astronomers to try to include them.

There were undoubtedly other GLAST-related Suzaku proposals, but we do not have a full list of those
