2007-04-26

Data Server

- Fixed old dataserver for Tom to run
- Fixed problem with the number of subprocesses in the new dataserver.
- Working on Pruner tab (interface) in the new dataserver, similar to old pruner
- Waiting on Dataset selection from data catalog (see below) to integrate into Data Server

Data Catalog

- Major new features (see Jira roadmap, version 0.7):

- o [50%] A line mode client to allow manual insertion of Dataset records

- o [30%] Dataset selection based on meta-data queries

- o ▪ Works for system-maintained meta data

- o ▪ User Meta data under way

- o ▪ Moving to DEV today to test<-->develop

- o [10%] Improved browsing of the catalog hierarchy

- o [20%] Remote site and XRoot support

Pipeline

- Cluadia Levalley is testing remote job submission from SLAC.
