

CCB Action 20050525

svac changes

SVAC tasks at v3r1p17.

TEM ids were appended to the module serial numbers in the eLog DB in eLog v2r2p6. The script that builds recon jobOption files was not modified to strip the TEM id off again before writing the serial number to the jo file. It has been fixed to do so now. Recon has been tested with this change.

See <http://jira.slac.stanford.edu/browse/SVAC-56>.

This is fixed in svacPipeline v3r1p17.
