

# 2nd Workshop on Data Preservation and Long Term Analysis in HEP

26-28 May 2009 at SLAC National Accelerator Laboratory in Menlo Park, CA

---

This is a follow-up to the first workshop held at DESY. At this workshop we will have progress reports from the various working groups, status reports of preservation efforts at the various HEP experiments, talks on data preservation outside HEP, and preservation technologies. The goal of the workshop is to greatly advance towards a final report to be presented at Lepton Photon 2009 and to establish the means by which progress towards effective data preservation can be implemented and monitored.
