

Heavy Photon Search Run and Results Update

Holly Szumila-Vance

On behalf of the Heavy Photon Search Collaboration

Old Dominion University, Department of Physics

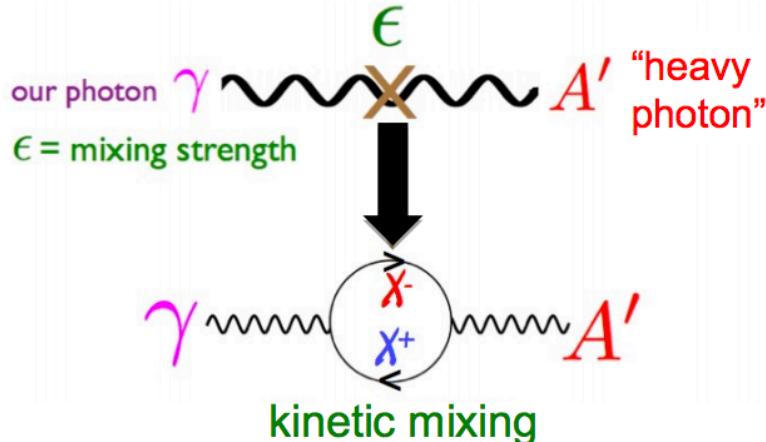

DNP Fall Meeting, 16 Oct 2016

Vancouver, BC

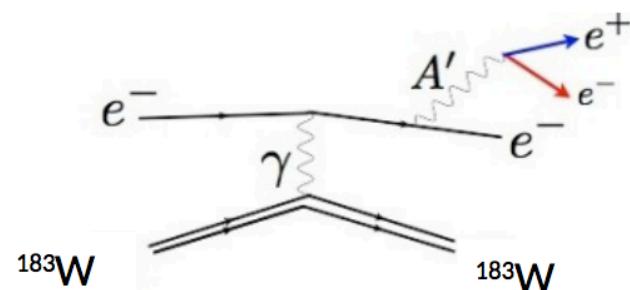

Motivation

Additional U(1) symmetry in nature
-> new gauge boson!

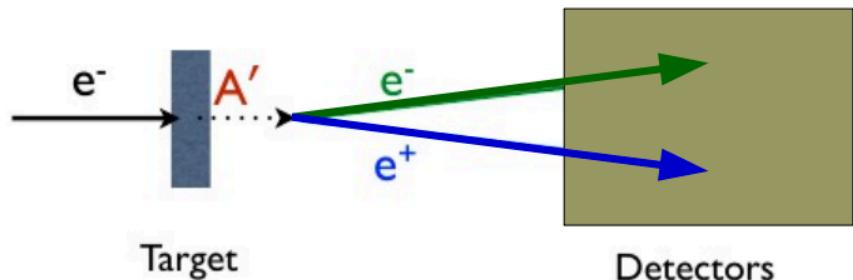

Kinetic mixing could be the leading interaction between the Standard Model and Dark Sector!

Experimental Signature

$e^- + {}^{183}\text{W} \rightarrow A' + X \rightarrow e^+ + e^- + X$
 $A' \rightarrow \text{Standard Model particles}$

Standard Model
 $g \quad W^\pm, Z \quad \gamma$

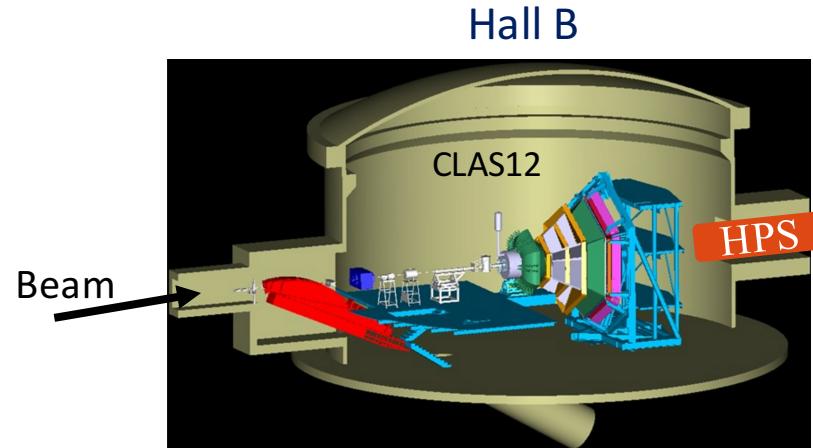

Heavy Photon?

Dark Sector
forces + particles
dark matter?

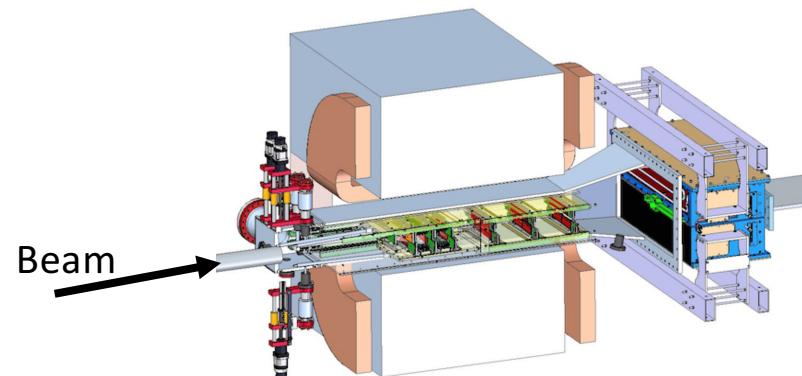

Experimental Setup

Jefferson Lab, CEBAF

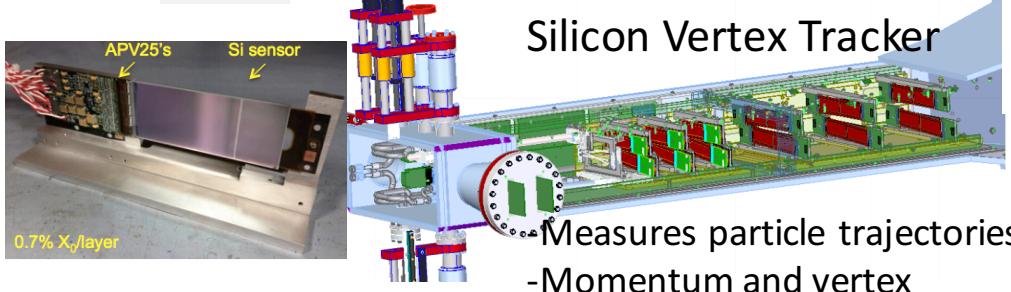

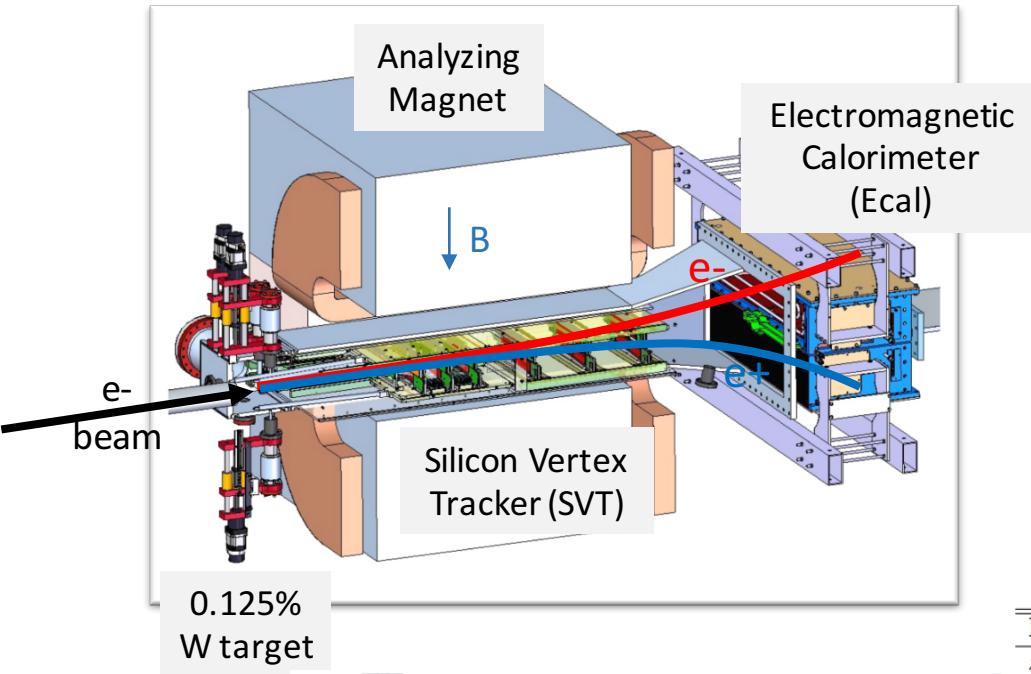

CEBAF max energy 2.2 GeV/pass (max 5 pass)
Simultaneously deliver beam to 4 halls

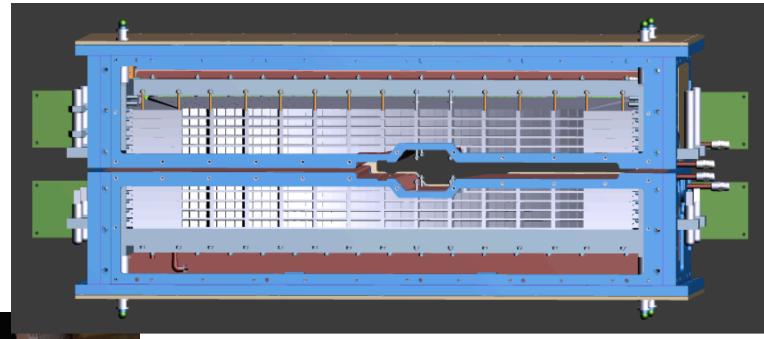

HPS is in the alcove of Hall B

Experimental Setup

Electromagnetic Calorimeter

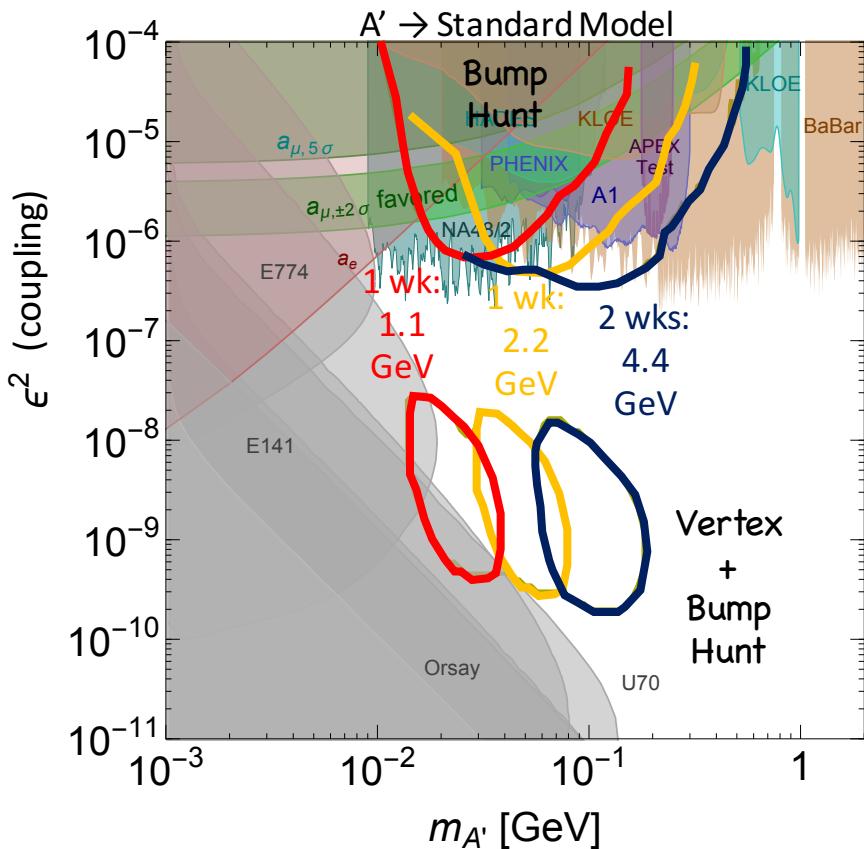

- Triggers events
- Measures particle energy
- Resolution: 4%/ \sqrt{E}

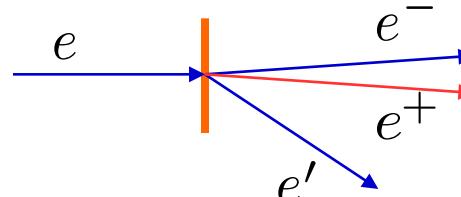

SVT active area
0.5 mm from beam!

Layer	1	2	3	4	5	6
z position from target [cm]	10	20	30	50	70	90
Stereo angle [mrad]	100	100	100	50	50	50
Non-bend plane resolution [μm]	≈ 6	≈ 6	≈ 6	≈ 6	≈ 6	≈ 6
Bend-plane resolution [μm]	≈ 60	≈ 60	≈ 60	≈ 120	≈ 120	≈ 120

HPS Proposed Reach

Large ϵ coupling, prompt decay

Peak on large background

Runs status to date:

Spring 2015: Engineering Run

1.05 GeV, 50 nA

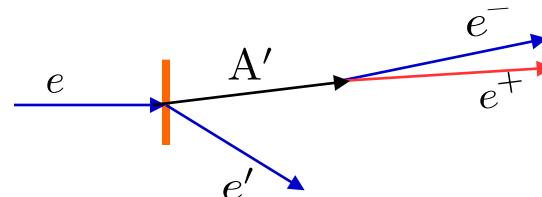

Achieved 30% of proposed production data

Spring 2016: Physics Run

2.3 GeV, 200 nA

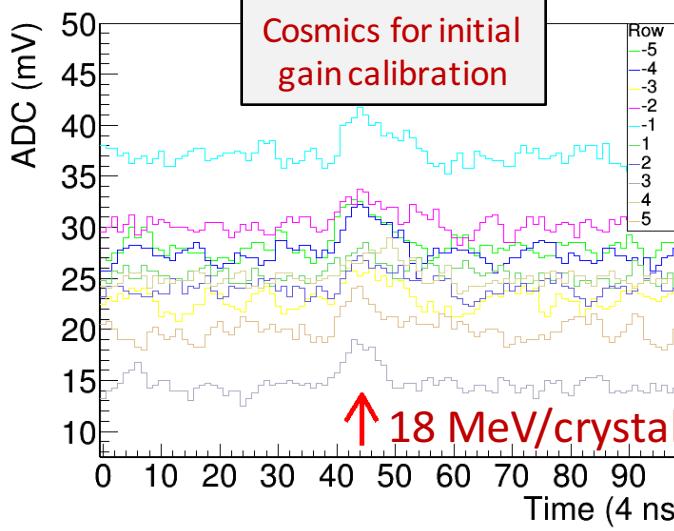

Achieved 77% of proposed production data

Small ϵ coupling, A' long-lived

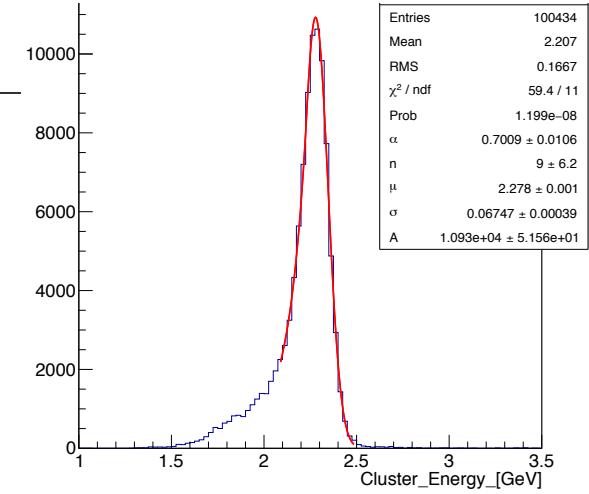

Few events, no background, displaced decay vertex

2016 Run: Ecal Performance

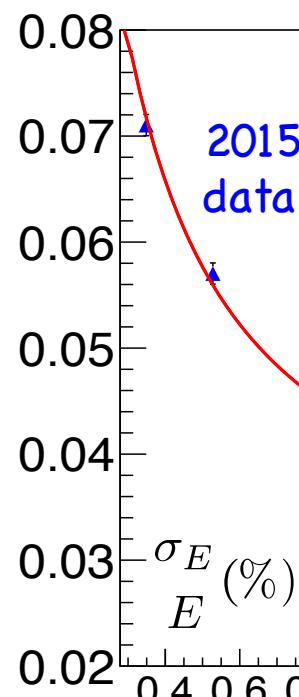

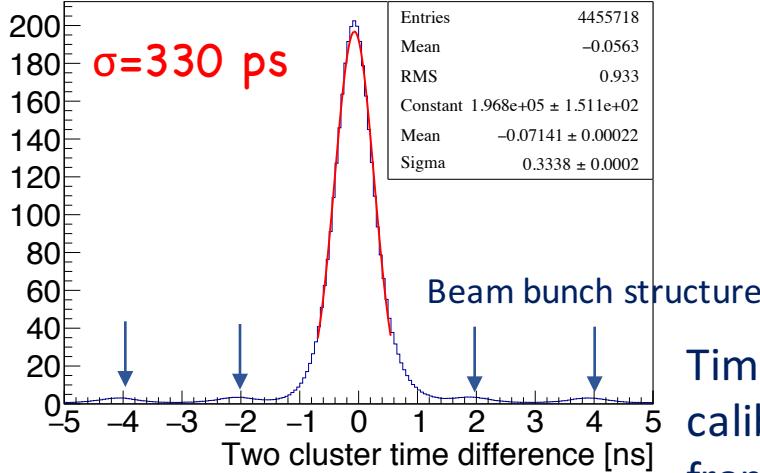

σ_E/E

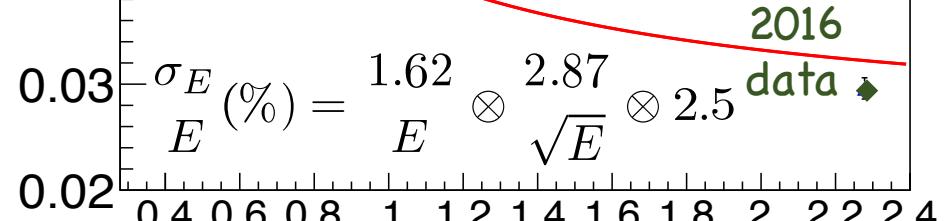

Elastically-scattered e- peak in fiducial region

Time difference between 2 clusters

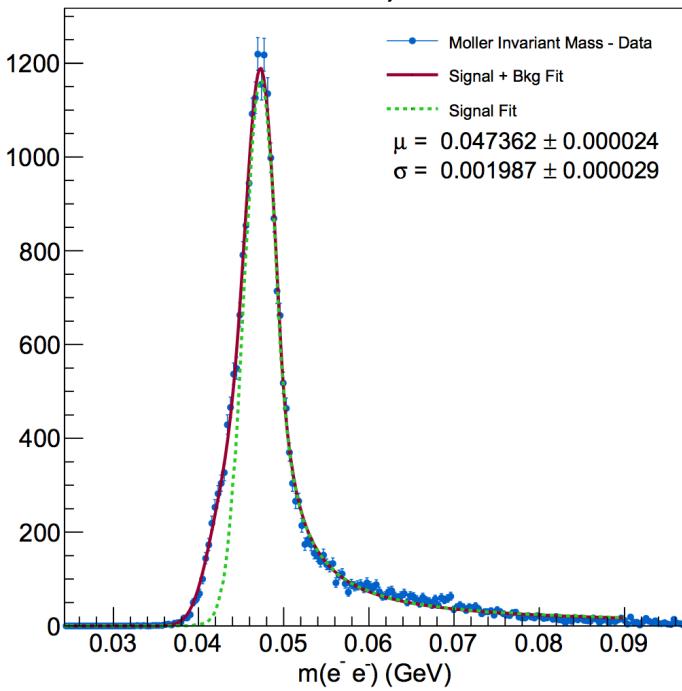

Timing offsets were calibrated using RF time from accelerator

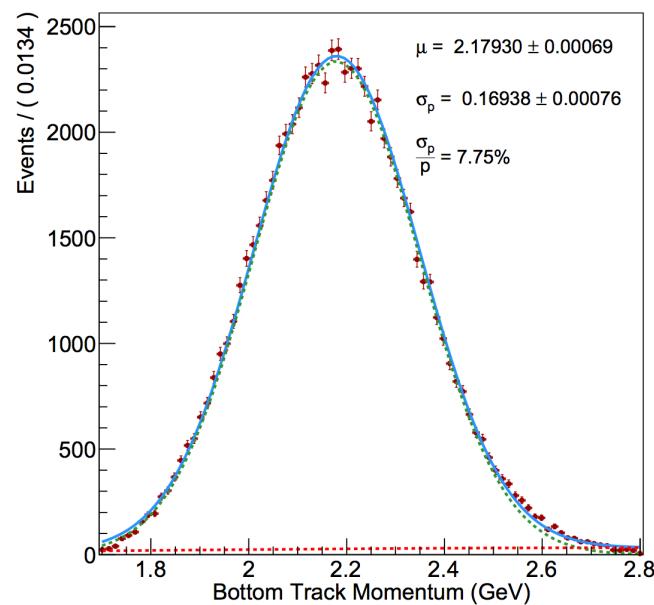

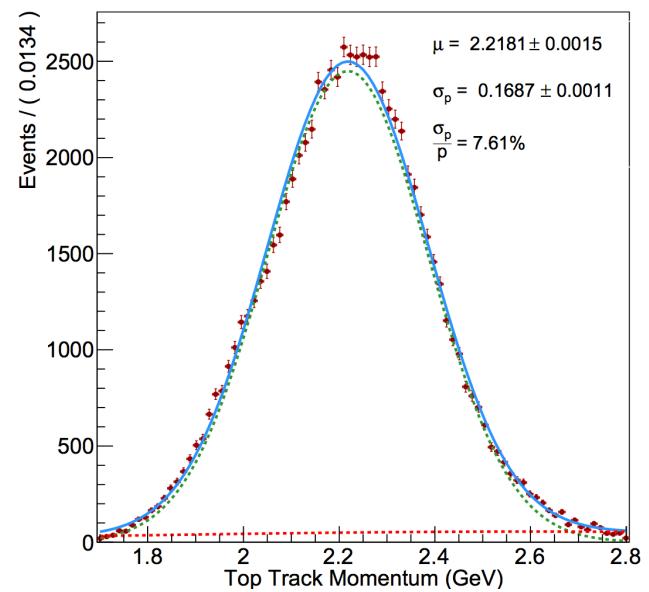

2016 Run: SVT Performance

- Calibration in progress
- Initial data, prior to alignment, already consistent with proposal

Moller Mass, initial data

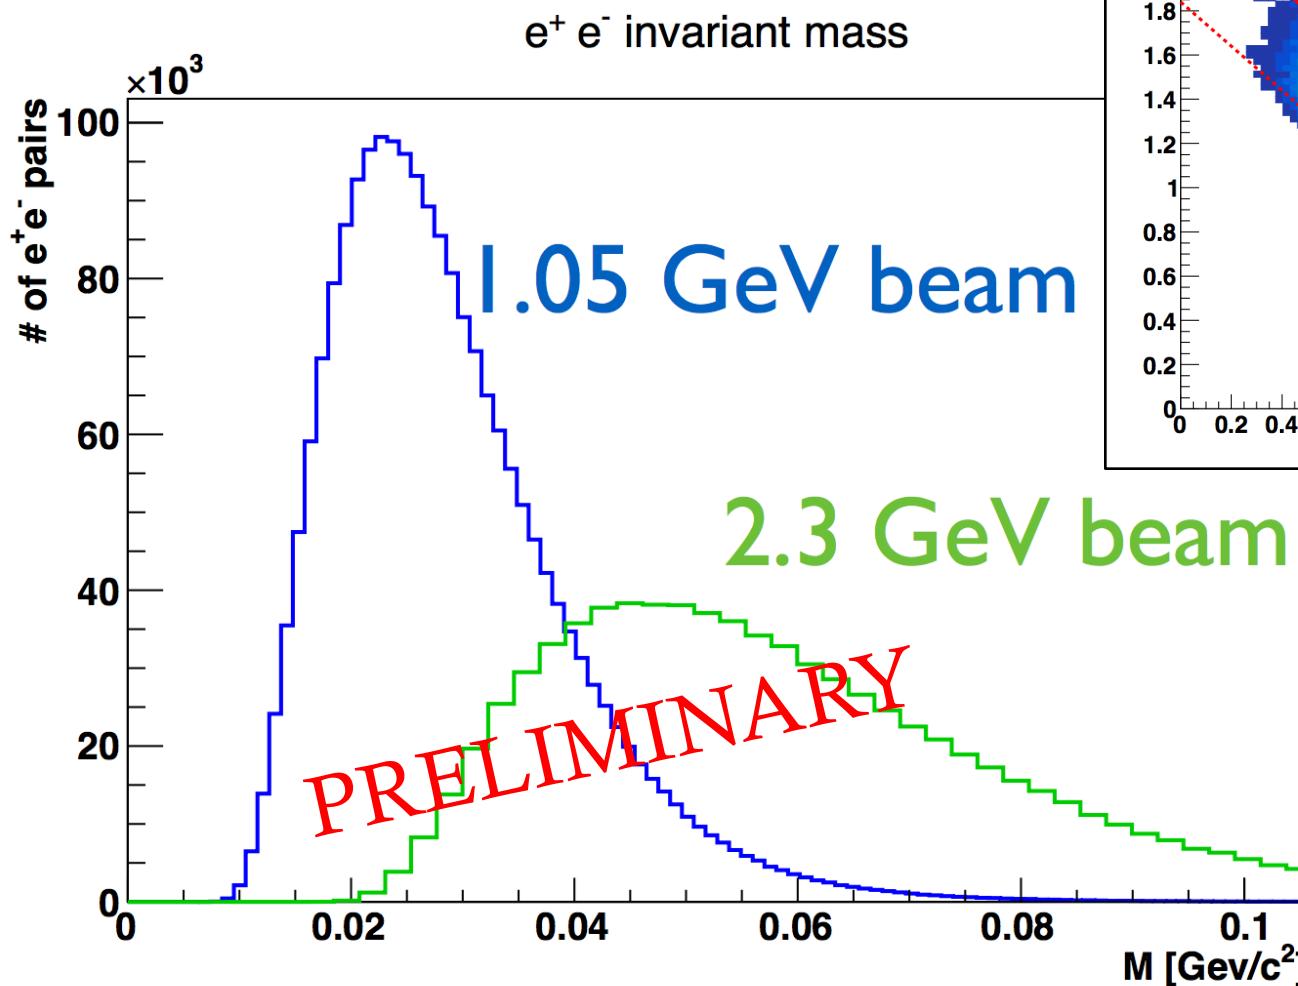

Elastically scattered e^- , initial data

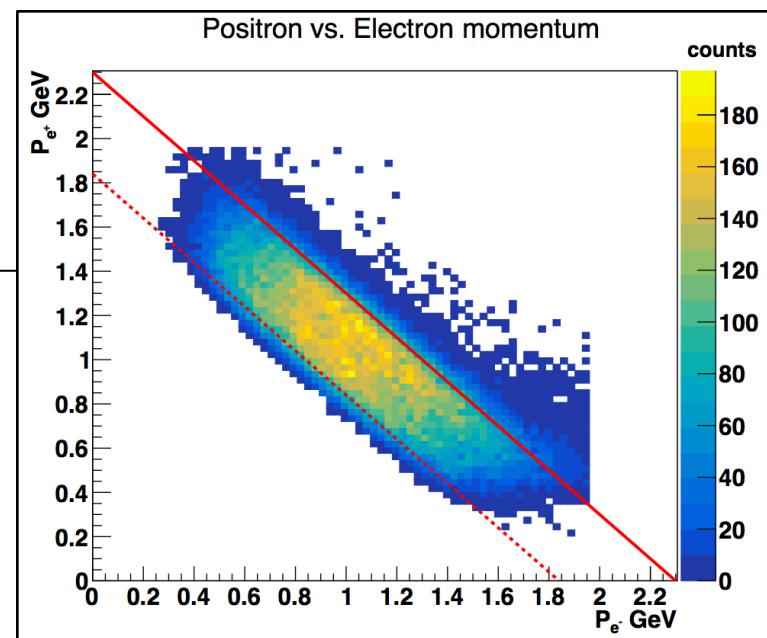

Invariant Mass

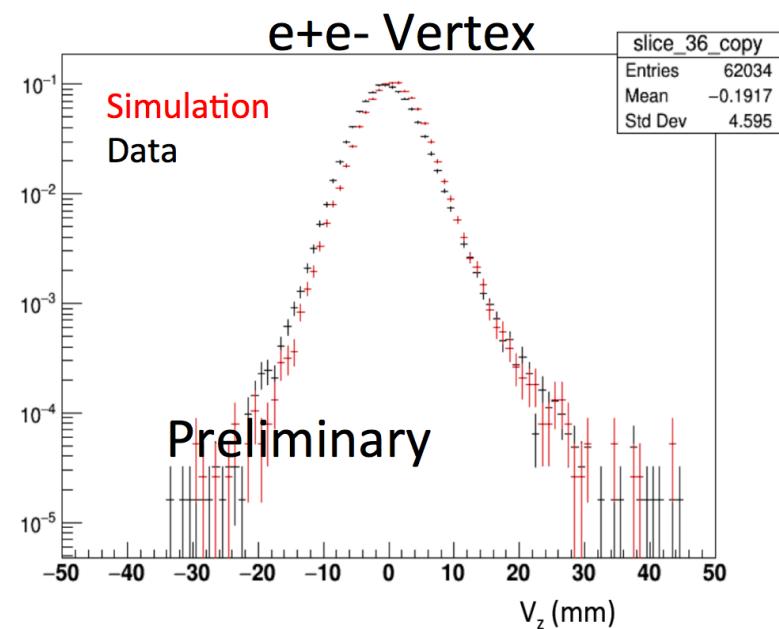

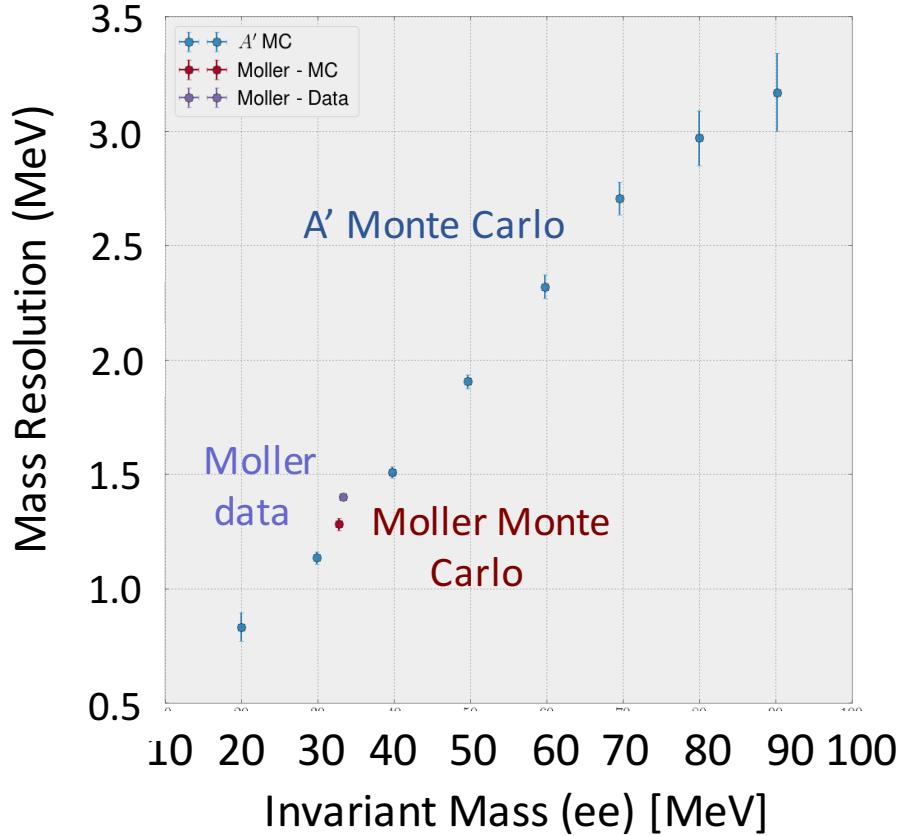

Searching for the Heavy Photon using a blinded analysis
(10% of the data)

Radiative Cut

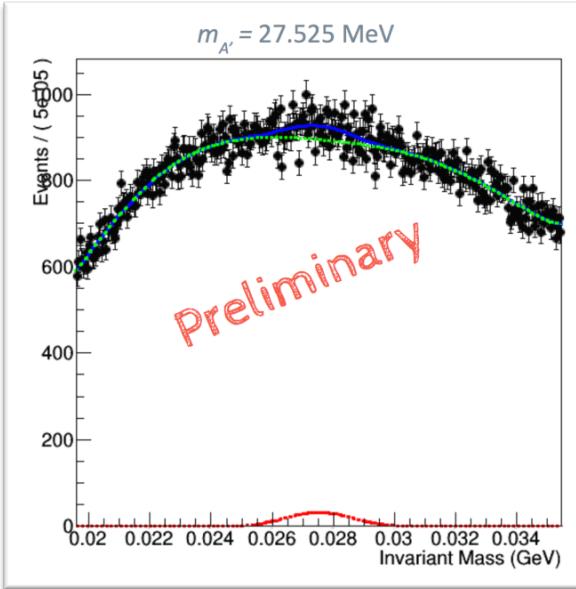

1 GeV Analysis

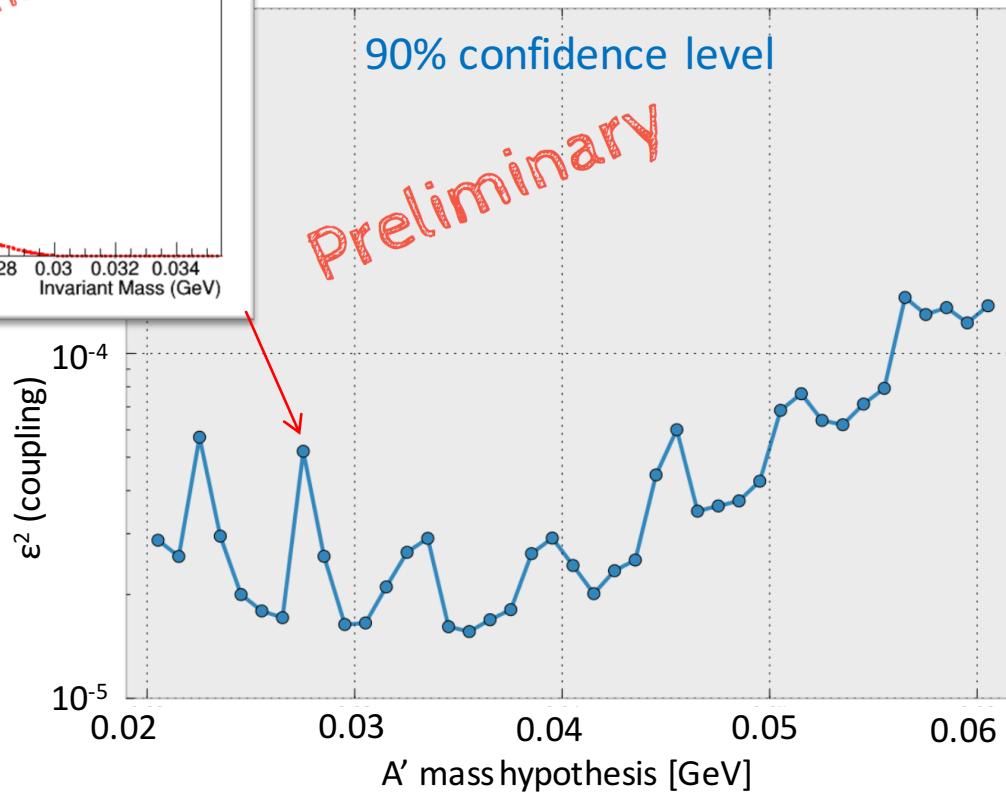

Parameter	Proposal value	Measured value
Beam current	50 nA	50 nA
SVT occupancy	<1%	1%
DAQ/trigg. rate	18 kHz	19 kHz
Pair mass res. @ 33 MeV/c ²	1.4 MeV	1.4 MeV
Pair vertex res. @ 40 MeV/c ²	4.4 mm	4.6 mm

1 GeV Analysis: Bump Hunt

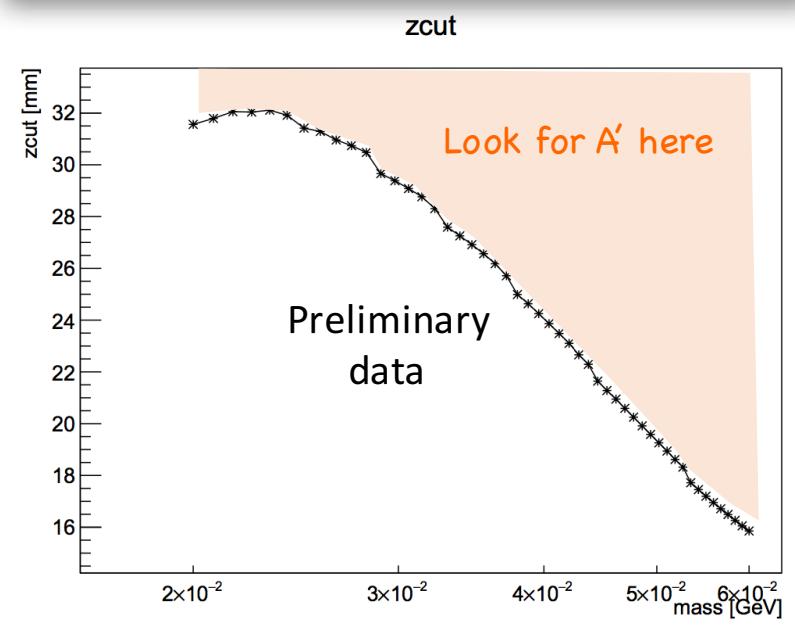

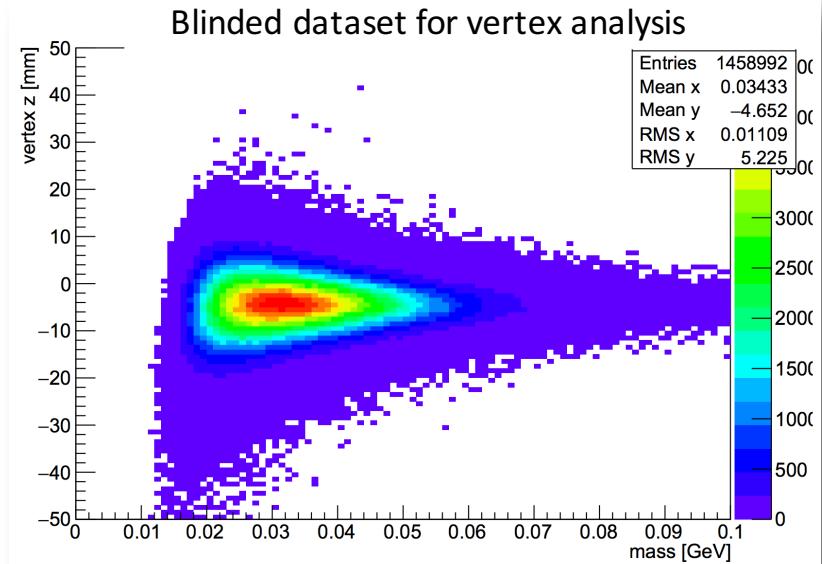

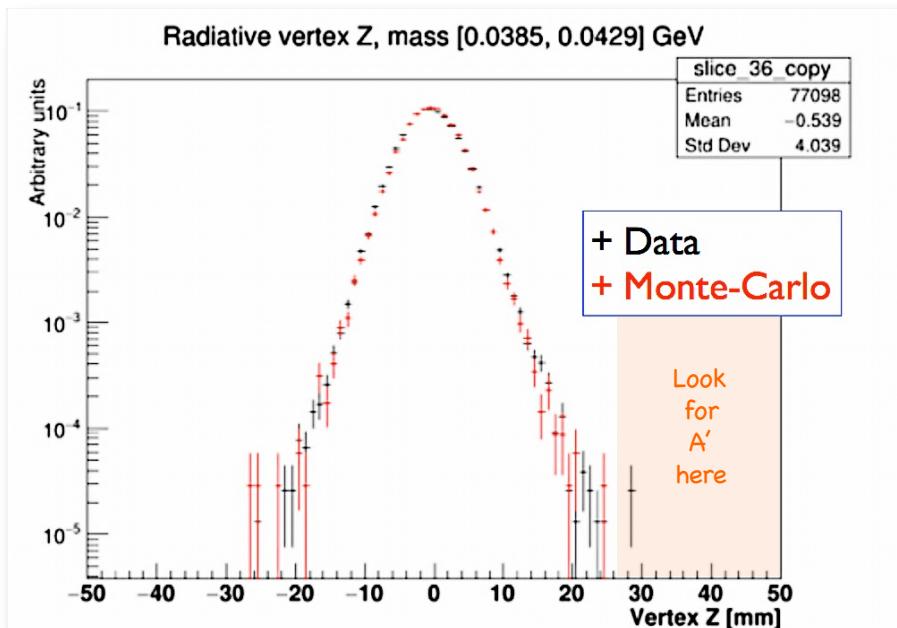

- 10% of 2015 data, SVT at 0.5 mm
- Conservative cuts
- Fits 7th order polynomial background + A' peak

- Fix A' “peak” width, moving “peak” across spectrum to determine upper limits

1 GeV Analysis: Vertex search

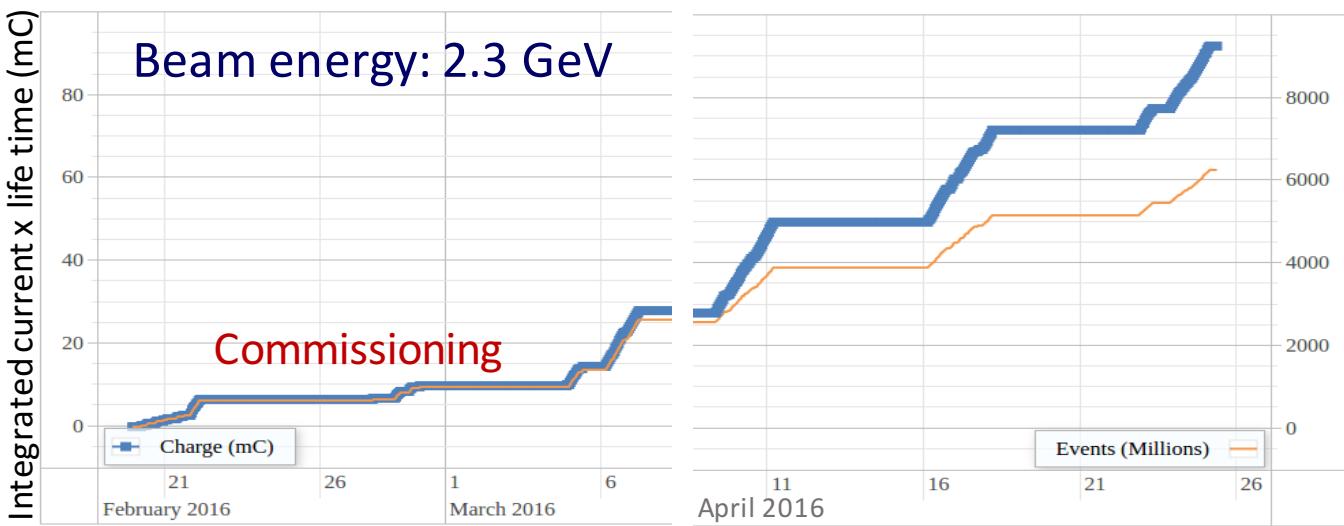

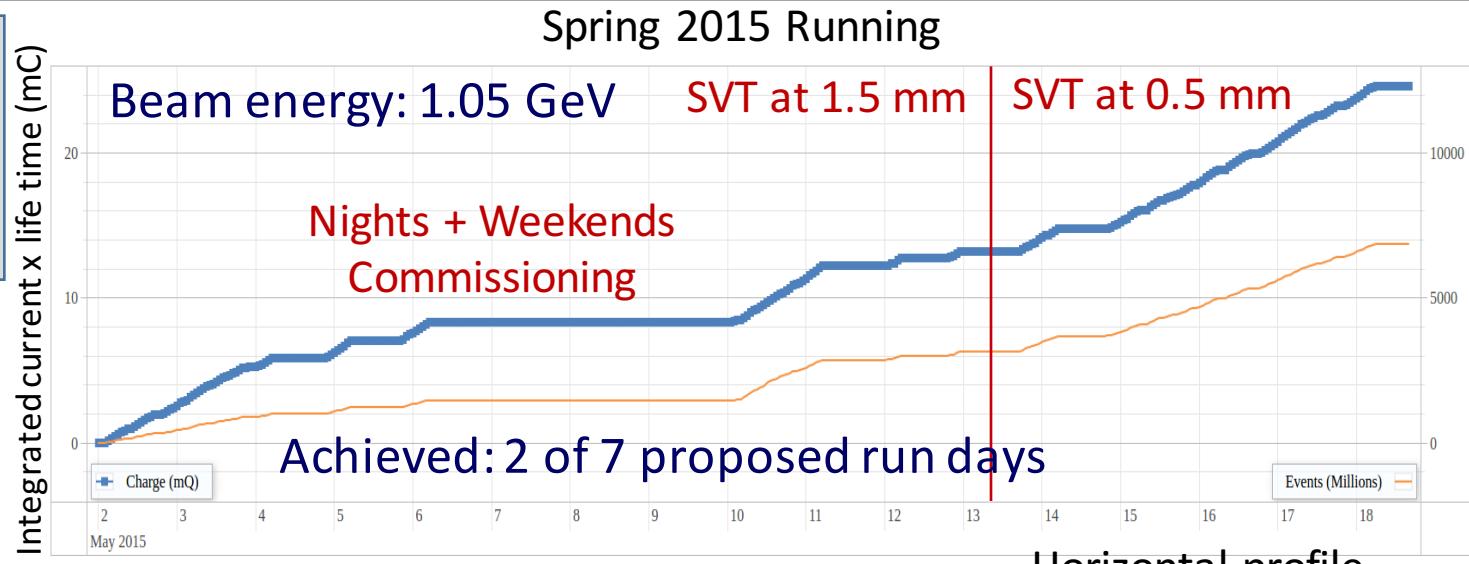

- Search for long-lived A' with separated vertex

Summary

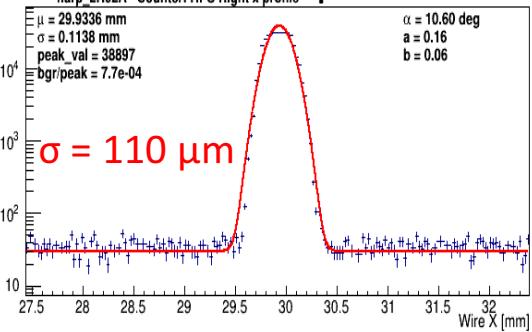

- Successful very short runs in 2015 and 2016 with data taken for both bump hunt and vertex search for Heavy Photons
- 165 days still remain: We expect next physics runs in 2018 and later
- Instrumentation papers are in preparation for the beamline, SVT. Ecal NIM submitted this past week
- Finalizing analysis and expecting results in early 2017

HPS Running

Achieved: 5 of 7 proposed run days
