

Pipeline 2 User's Group

Updates since last week...

‣ No meeting last week, but we did hear about the roll-out of the DataCatalog interface. It is not quite ready (possibly later today or tomorrow?). More info here: <https://confluence.slac.stanford.edu/display/ds/November+10+2006>

Service Challenge readiness:

‣ Much of the past week spent updating, testing & working the chinks out of the gtobssim pipeline2 system. Sufficient progress to run 1,500 jobs (1-year), but many important tools still missing. Many issues to resolve (e.g., interactive web vs. command-line driven; how to integrate task-specific details into the pipeline mechanism; reliability/reporting; flexibility of pipeline to respond to unforeseen problems).

‣ gtobssim pipeline2 task is running at this moment, using latest release (ST-v7r6p1) and SkyModel. This is a candidate for being final.

‣ Preparations for generating a pool of background events are (still) underway (pipeline1)

‣ Confluence area:
