# Vibration measurements on the concrete platform in CMS for LC studies

Ansten Slaathaug

Mechanical Measurement Lab, 2010.01.11

# Outline

---

- Slide 1 setup
- Slide 2 sensor position
- Slide 3 + 4 PSD
- Slide 5 Coherence
- Slide 6 transfer function with ref 2
- Slide 7 + 8 transfer function between ref 1 and ref 2

# Equipments and setup

---

- Sensors :
  - 4 Geophones (GURALP CMG-6T)

	SN T6946	SN T6945	SN T6998	SN T6997
Vertical	2 x 998 V/(m/s)	2 x 996 V/(m/s)	2 x 998 V/(m/s)	2 x 996 V/(m/s)
North/South	2 x 998 V/(m/s)	2 x 1016 V/(m/s)	2 x 998 V/(m/s)	2 x 1016 V/(m/s)
East/West	2 x 1003 V/(m/s)	2 x 991 V/(m/s)	2 x 1003 V/(m/s)	2 x 991 V/(m/s)

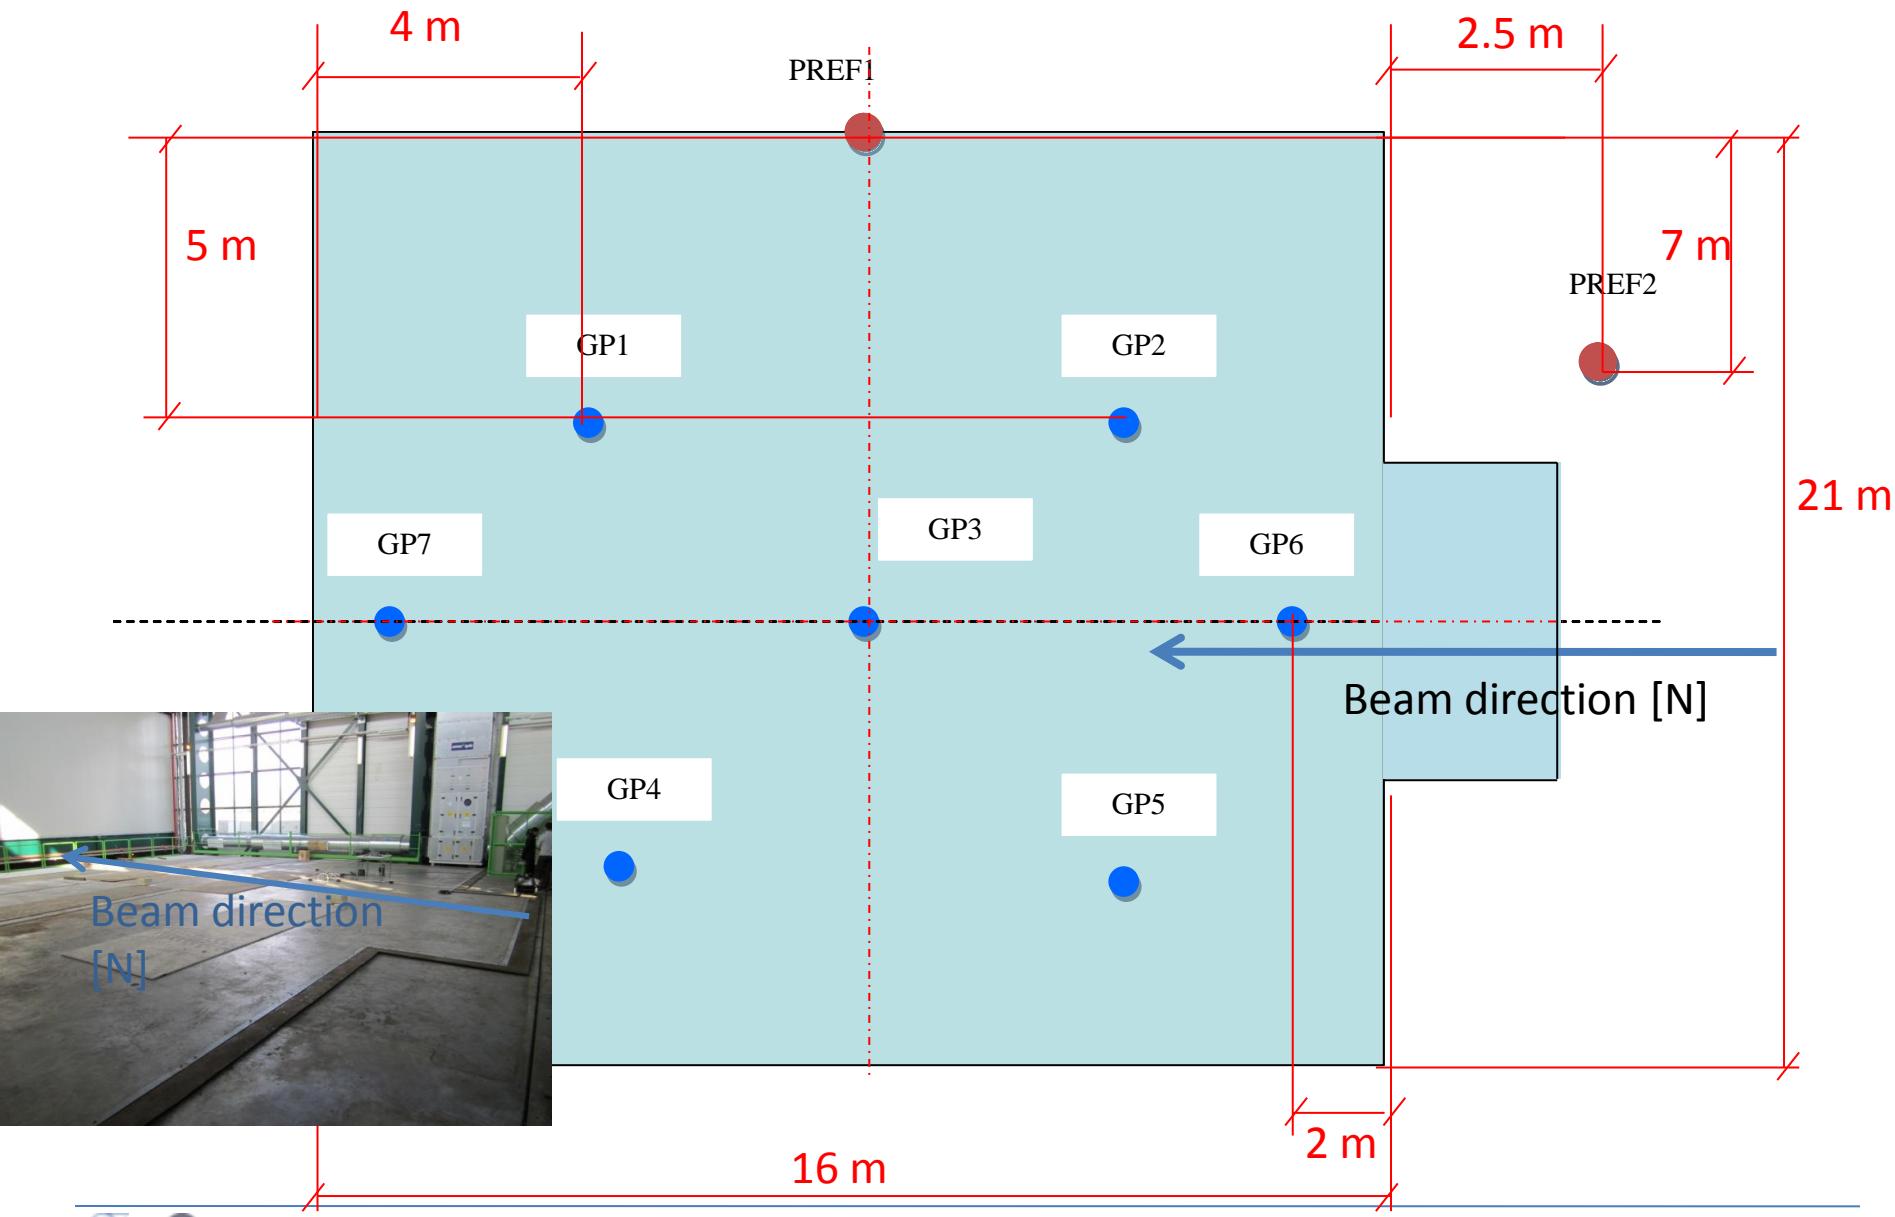

- DAQ :
  - MKII spectrum analyzer with ICP42s cards (24bits-10mV) / PAK software v5.5

- Analysis parameters :

Sampling rate	1024 Hz
Measurement Length	1321 s
Block duration	64 s
Overlap	66,7%
Window	Hanning
Averaging	Linear

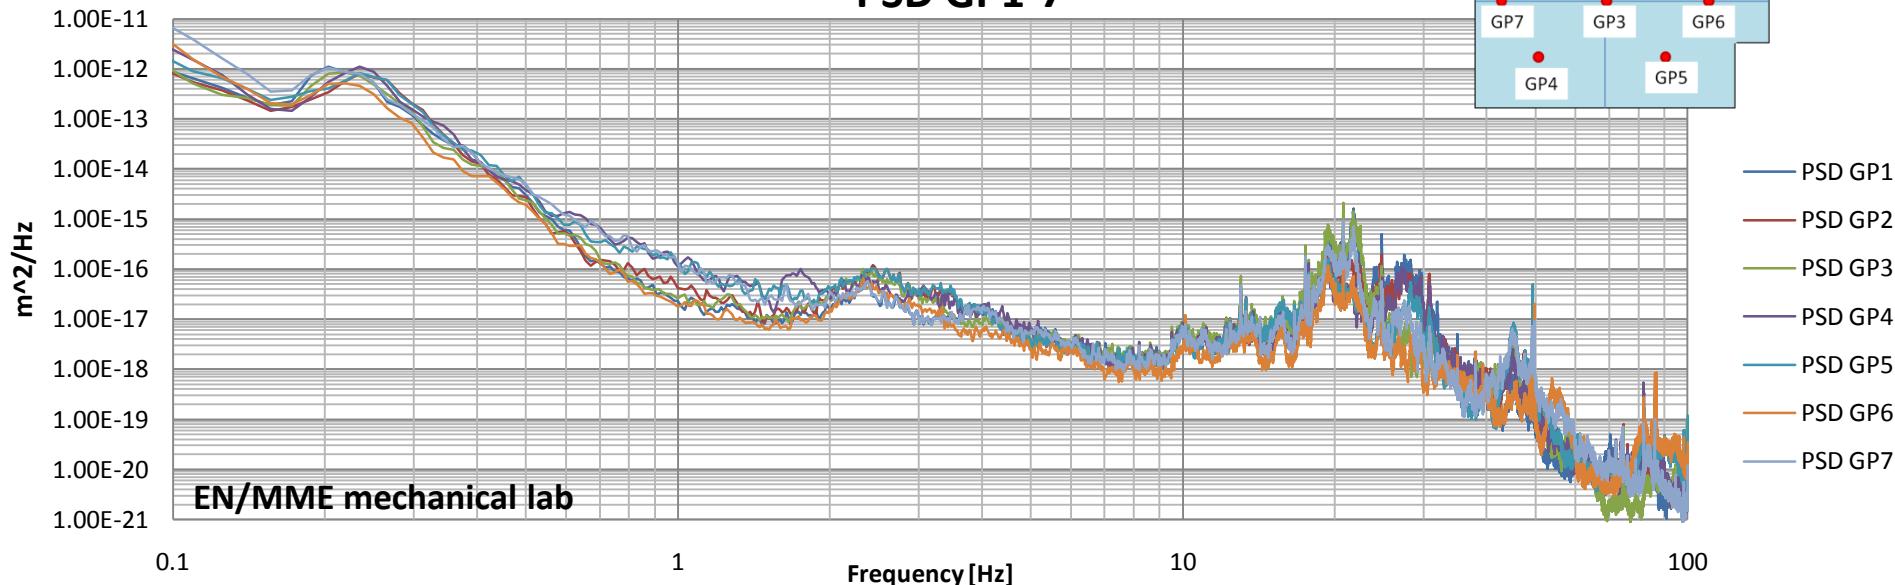

- Four measurements were performed to cover 7 measured positions with two reference points for each.
  - Measurement 1 GP 3 and 6
  - Measurement 2 GP 1 and 7
  - Measurement 3 GP 4
  - Measurement 4 GP 2 and 5

# Sensor position

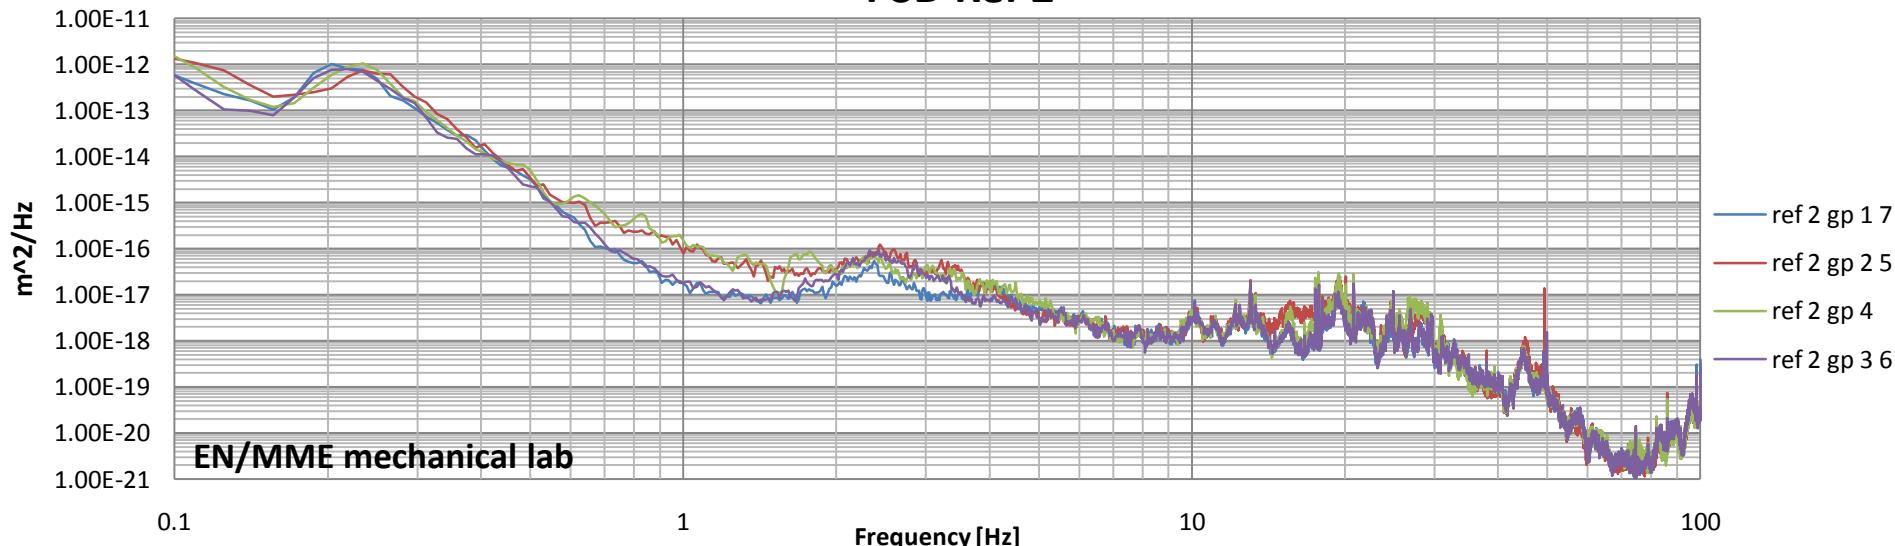

# PSD: Vertical direction

**PSD GP1-7**

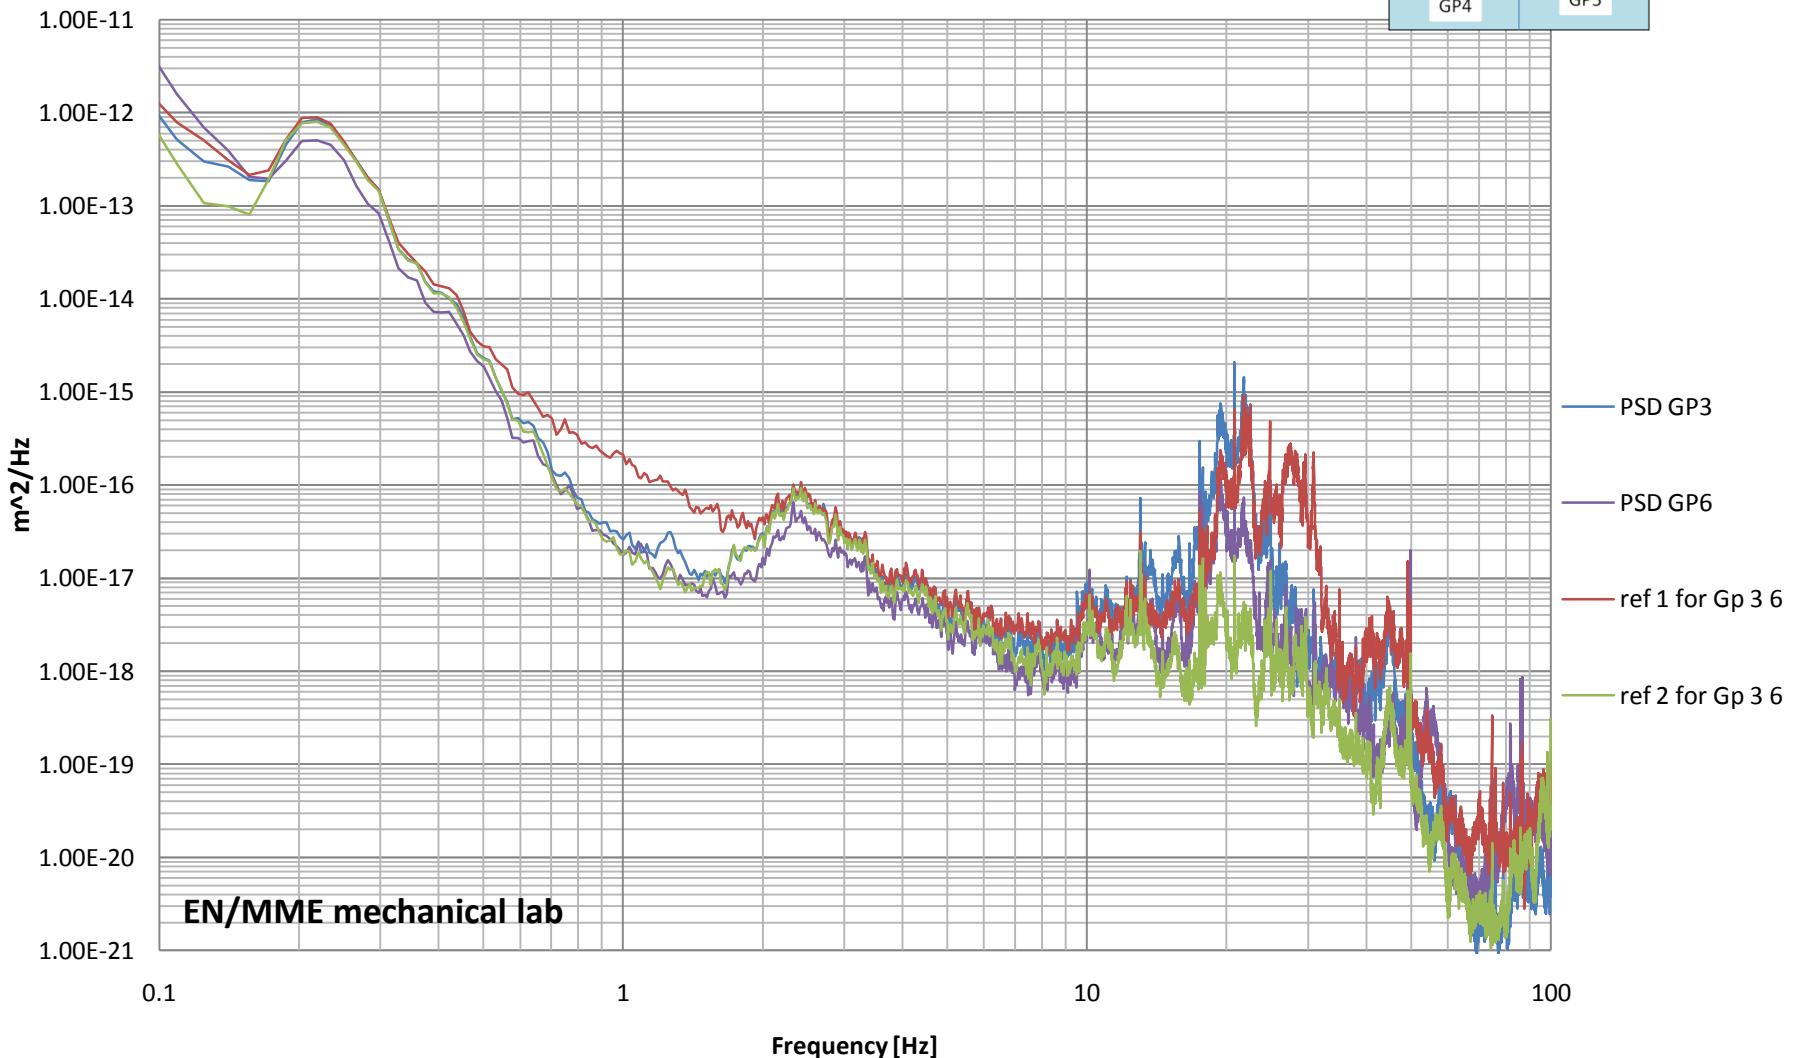

**PSD Ref 2**

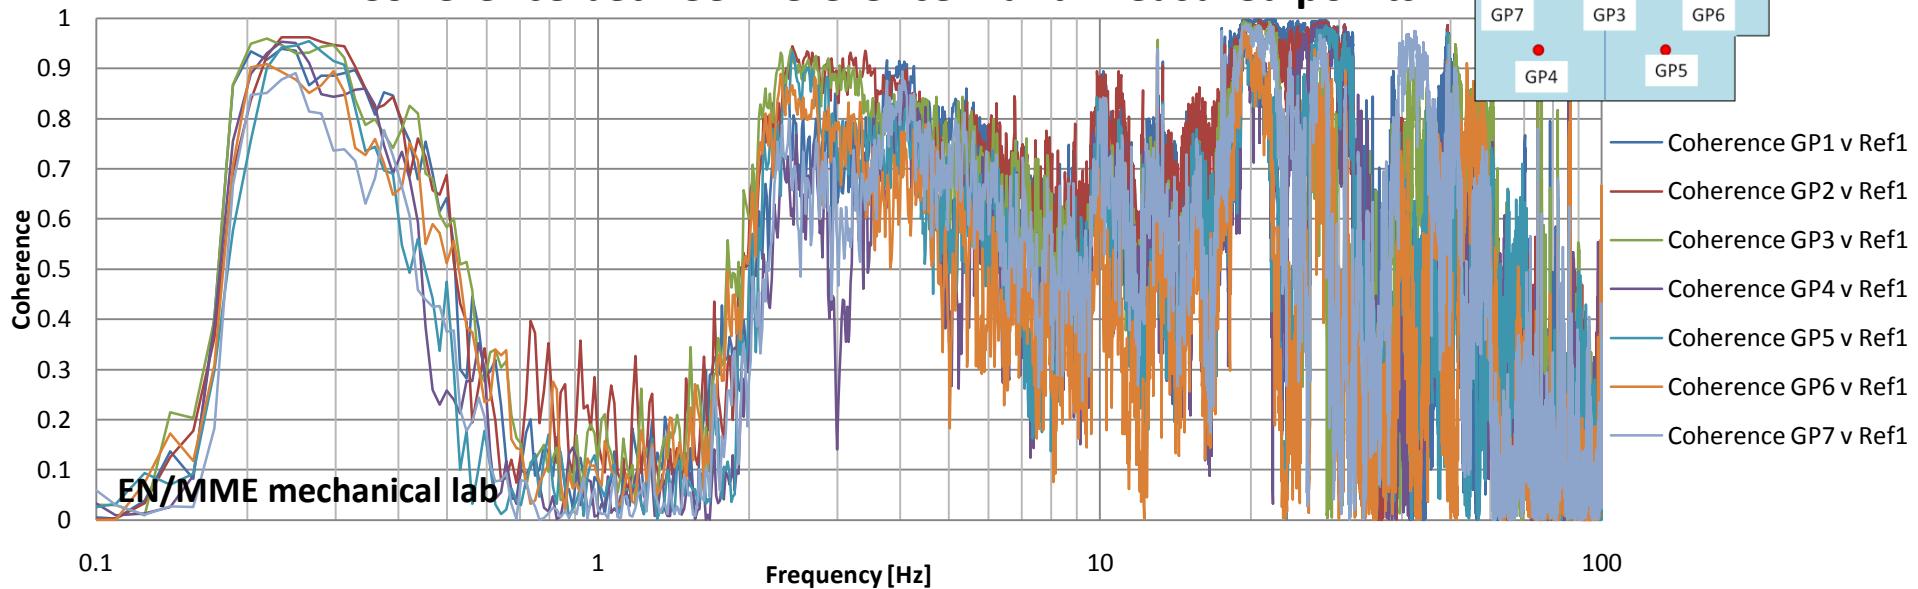

# PSD for a typical measurement

PSD

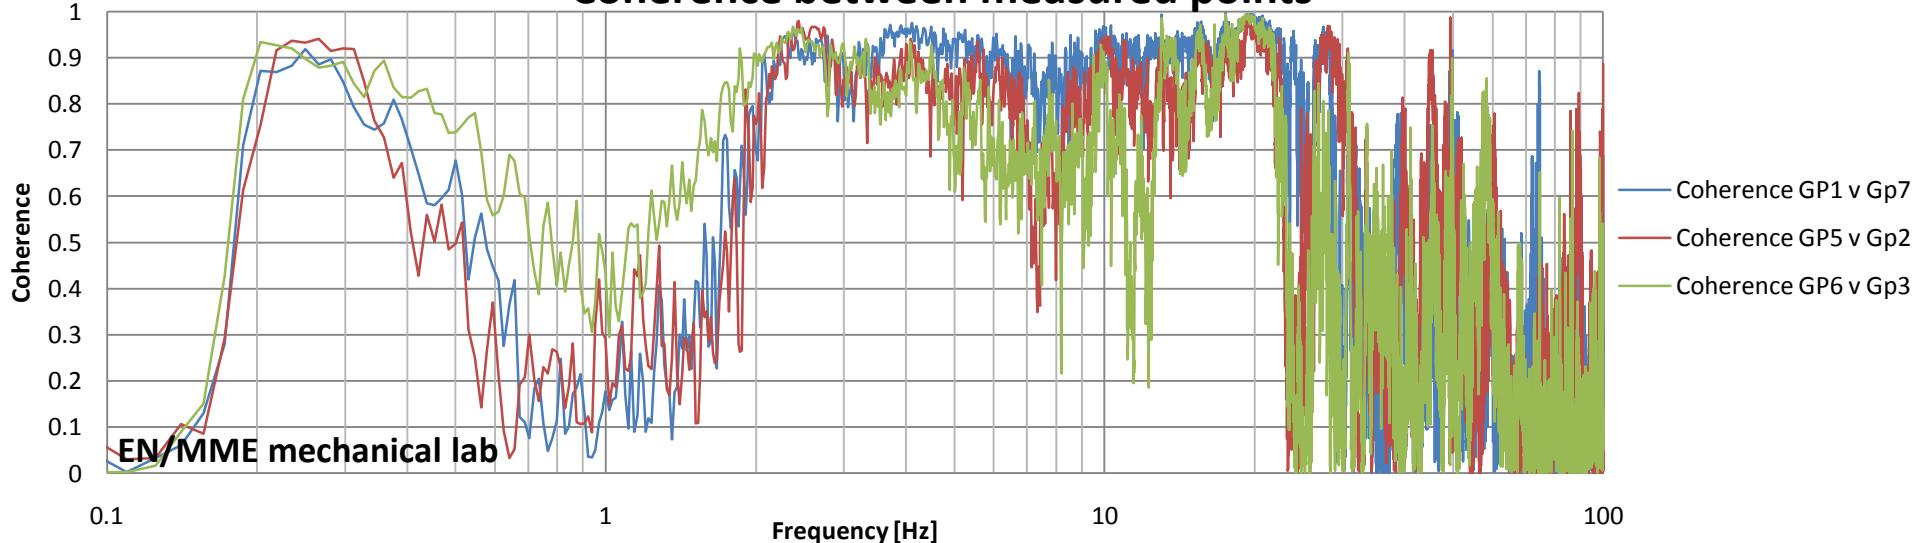

# Coherence Vertical direction

Coherence between reference 1 and measured points

Coherence between measured points

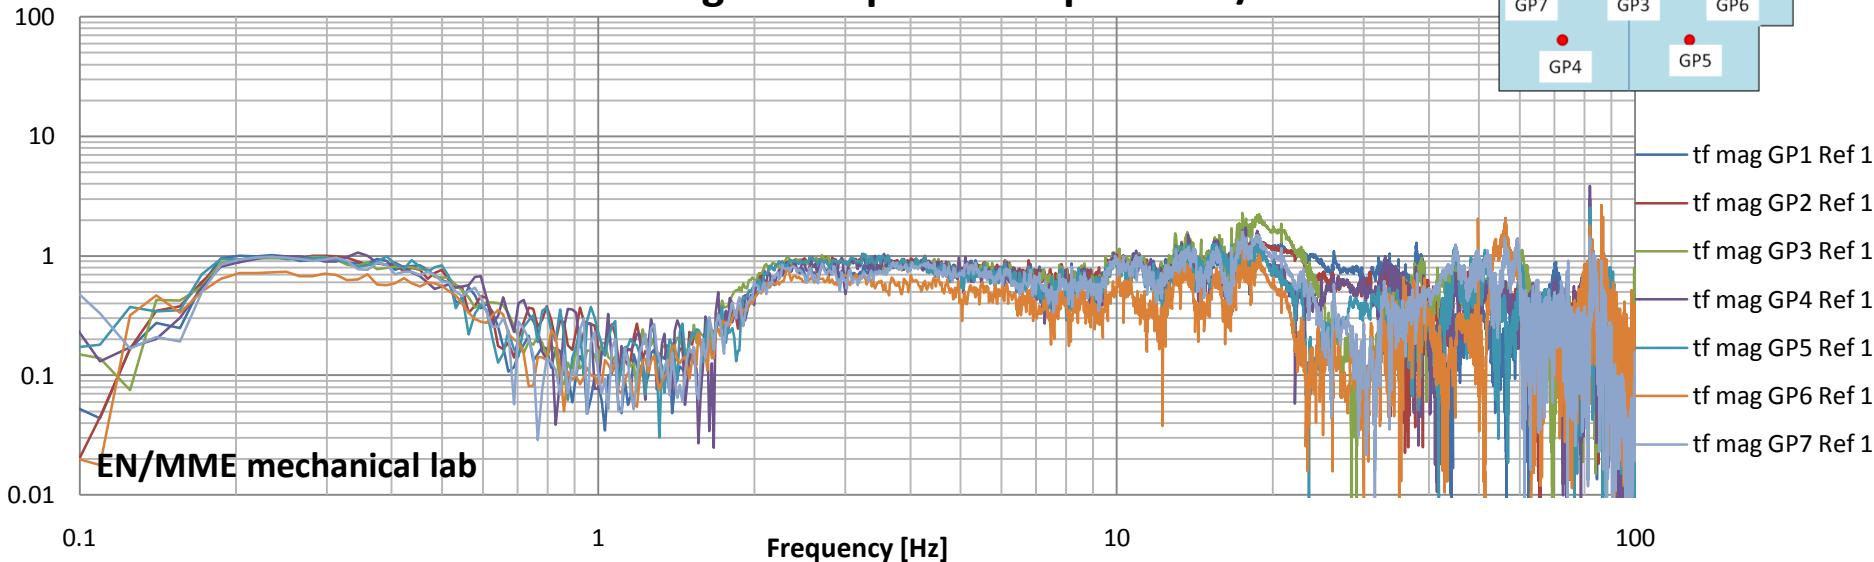

# Transfer function: Vertical direction platform / ref 1

Ref 1

Ref2

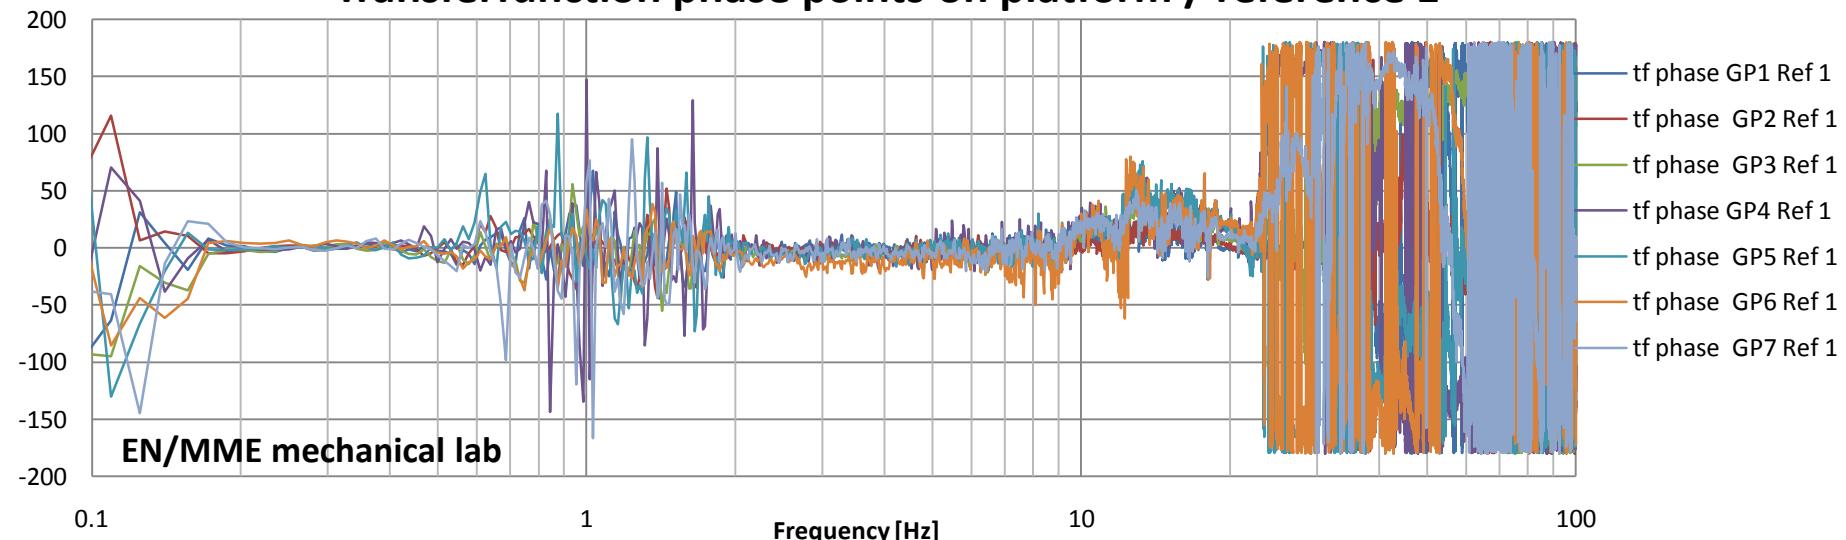

## Transfer function magnitude points on platform/ reference1

Magnitude

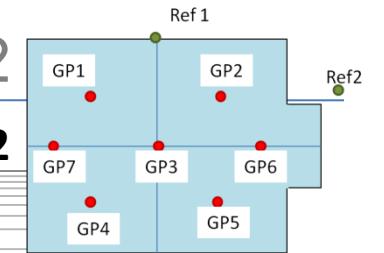

## Transferfunction phase points on platform / reference 1

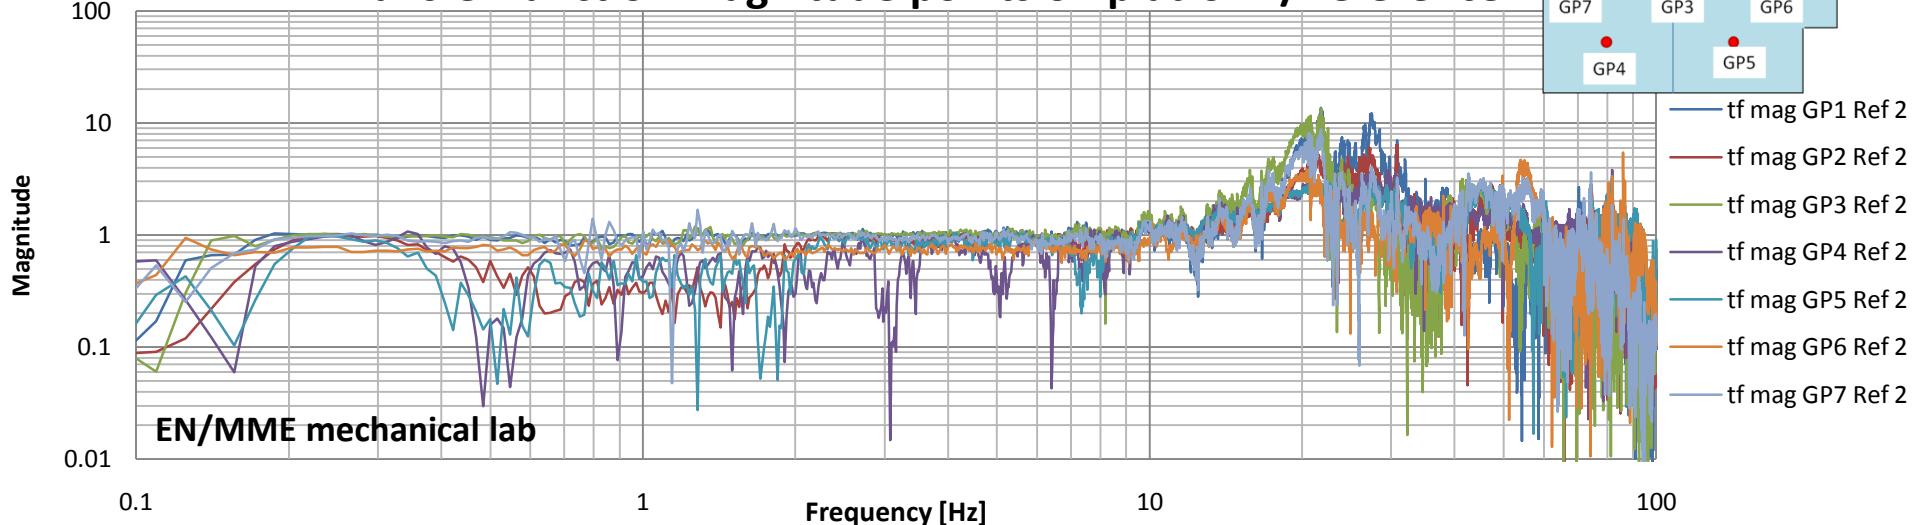

Phase

# Transfer function: Vertical direction platform / ref 2

## Transfer function magnitude points on platform/ reference2

## Transferfunction phase points on platform / reference 2
