PASS 1

- http://confluence.slac.stanford.edu/display/hpsg/Reconstruction+Passes+Documentation

- 1500 EVIO → RECON → DST+DQM jobs
- Largely finished in 1 day. Cleanup failed jobs after that.

- 20% RECON failure rate on 1st and 2nd attempts
  - Most cases log messages look fine, just missing SLCIO file on tape.
  - DB connection issue?   Haven't noticed any related log messages.
  - 3rd Try: Only 4 jobs remain with missing SLCIO output
    - They were the last in a run where the DAQ crashed
    - JEVIO can't yet handle truncated EVIO file
    - Short term, eviocopy, then run hps-java

- >>100 GB of log files on /work, so started gzipping them.
- DQM histograms only written to /work, not /tape (same as pass0)

- Some small updates to datacatalog scripts to work out of the box at both SLAC and JLAB
  - So long as path contains "/pass\d+/" and file names are unchanged
  - Just need to know high level dir for SLAC ("/nfs"?)
