

SVT HV Bias Run lists

Per Hansson Adrian – 6/9/2015

Overview

Idea based on having time ranges associated with runs for 'good' HV status in conditions DB

Confused about EPICS bank.

HV is in bank every sync event: ~2Hz (all "later" runs?)

I would still like to use DB to be consistent across all runs/analyzers and have a "verified" good run/event list?

Run integration
