Field Map for 2015 Engineering Run

- Received updated field maps from JLab
- 3D field maps simulated with TOSCA corrected with Primex measurements for fringes by Greg Kalicy (gkalicy@jlab.org)
- Needed to scale field to our running conditions and unfold into all four quadrants
- Created new detector
 - HPS-EngRun2015-Nominal-v2-fieldmap
 - Still need to address issue of file location
 -

Alignment

- Last week had held layer 4 fixed. Investigated fixing layers 5 and 6.
- Report on constraining layer 6 and deriving translations for other layers with respect to the harp scan wire and hits in layer 6 (hole module).

Sensor Offsets wrt Layer 6

Next Steps

- Put the shifts into detector description
 - Still deciding how to best do this...
- Run some field-on Fee events
 - check momentum and χ^2
- Run some field-on Møller events
 - check vertex position and mass
