

# Stanford/SLAC SC16 Floor Space Draft

---

Stanford University has allocated a 20' x 30' booth space, floor location #2101, in the Salt Palace Convention Center.

The attached draft diagram is not to scale. Utilizing the Stanford carpet again as a frame for our booth we came up with a different idea for this year.

## Notes:

- Stanford already has a ceiling sign and "S" carpet.
- Rectangular wall area with openings on each side for access.
  - SciComp graphics on the outer walls. With the idea of having the tree graphic on the carpet continuing up the wall where the monitor is mounted.
  - The inner walls we would like to be "white board" surfaces to allow for writing with dry erase markers for collaboration.
  - Two tables (a bit larger than last years) each with 3 chairs.
  - Storage area to lock away items.
- Flat screen monitor (4K/3D TBD) mounted on the outer wall (facing entrance).
- The remaining carpeted area will have a couch and two cubes (like last year) facing the monitor.
- Two kiosks at the entrance.

The budget has not yet been established but I would say that we are attempting to keep the costs down as much as possible while retaining a great presentation. Hopefully this draft design will align with that thinking. We look forward to working with you again and hearing your thoughts and ideas. Please do not hesitate to call if you have any questions or concerns.

Thanks,

Neal Adams (SLAC National Accelerator Laboratory) and Phil Reese (Stanford University)
