

Group C Test Setup

4/1/2019

Matt Solt

Introduction and Setup

- Group C now has 2 symmetric metal boxes for testing U Channels - insulated with polystyrene and weather-sealed
- Chiller is cooled with Glycol/Water 50/50
- Humidity sensor connected to arduinos (Thanks Omar) and readout with DAQ laptop
- **DO NOT COOL WITHOUT CHECKING HUMIDITY READINGS**

Humidity Monitoring

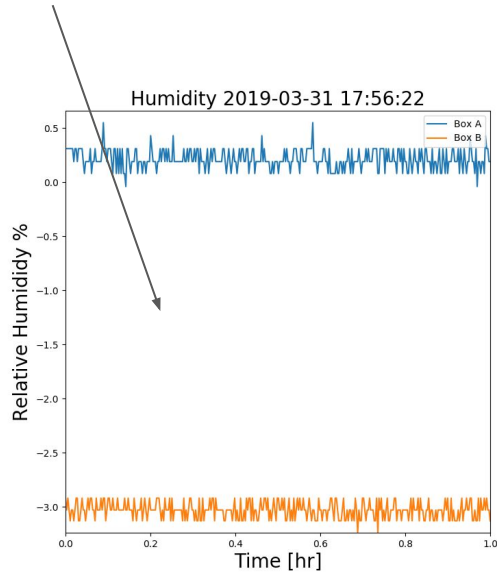

Heavy Photon Search @PhotonHeavy · Mar 27

Hello World! My name is the Heavy Photon Search, but you can call me "HPS" for short.

Follow the HPS Twitter Bot at: <https://twitter.com/PhotonHeavy> for live updates (plots and warnings)

Stable readings show $\sim 0.5\%$ and $\sim -3.0\%$ humidity

Heavy Photon Search @PhotonHeavy · Mar 27

This is a picture of all my friends!

HPS Collaboration

May 3 - 5, 2017
Jefferson Lab • Newport News, VA

Heavy Photon Search

@PhotonHeavy

I am a precision vertexing detector. I like searching for heavy photons.

Twitter Bot Live Updates

Twitter bot complains if humidity is above threshold or readout is disrupted, and when humidity is back at an acceptable level

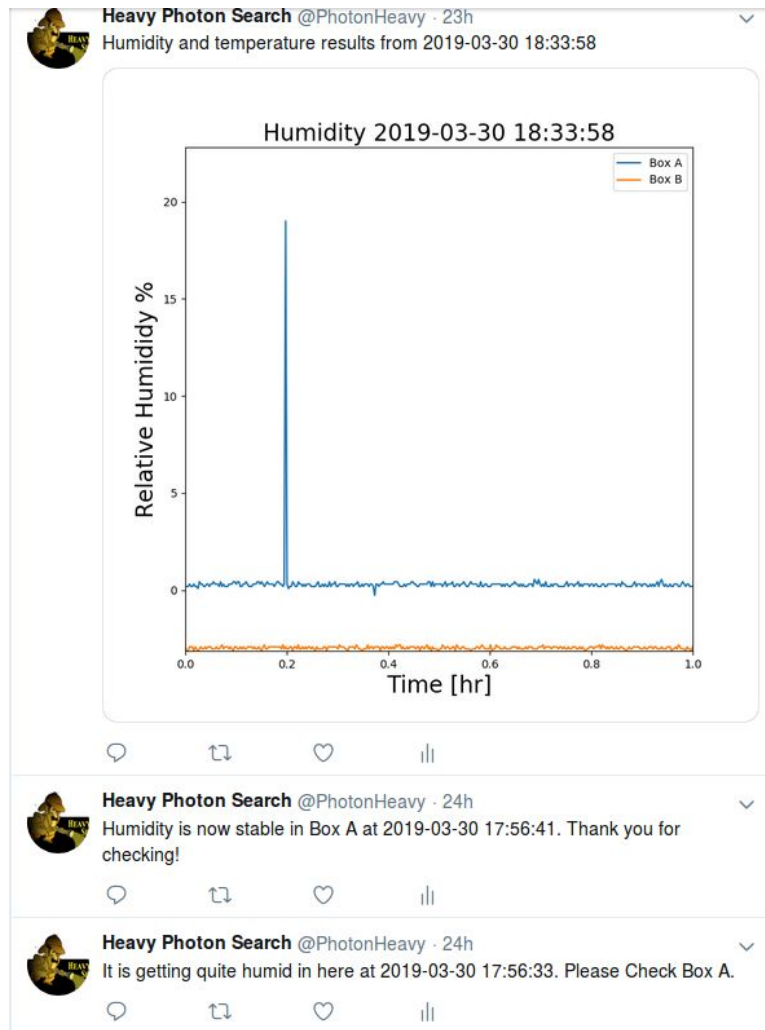

Plot humidity every ~ 1 hr (configurable)

 **Heavy Photon Search** @PhotonHeavy · Mar 29
I have lost connection to the test box at 2019-03-29 13:32:38. Please Check Box A.

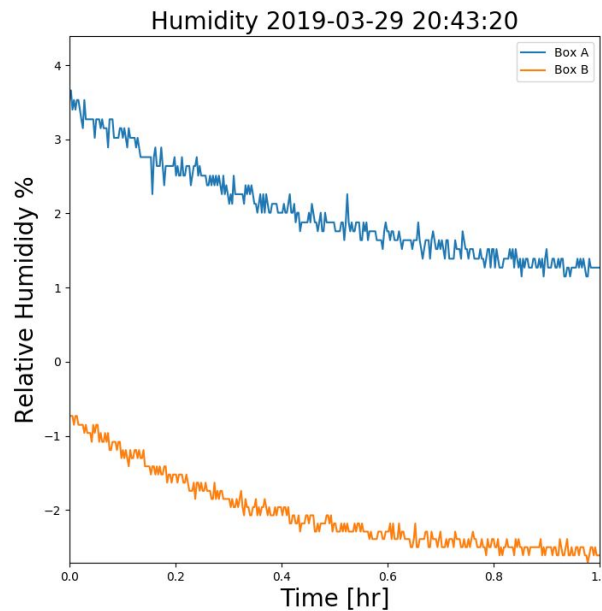

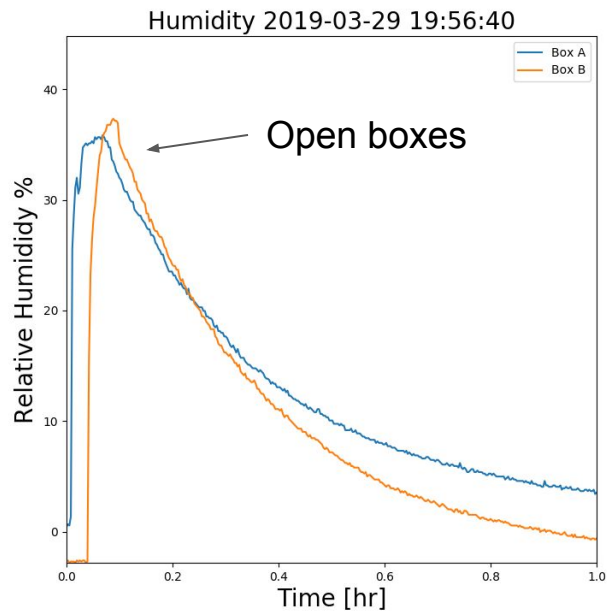

Omar stole the DAQ computer

 **Heavy Photon Search** @PhotonHeavy · Mar 29
I have lost connection to the test box at 2019-03-29 13:32:37. Please Check Box B.

- Stable running over weekend.
- Takes ~1-1.5 hr to get down to stable humidity

Future Work

To Do:

- Polyester sheets (protect puncturing of polystyrene), will be arriving today
- Cooling lines (adding exterior valves and trim cooling lines)
 - This can be done quickly when we know when we're going to put the u-channels in
- Final Cleaning

When we are done testing:

- Figure out what to do with the boxes
- Blow out the glycol/water mixture from the cooling lines, cap them
- Gel packs for transporting the silicon
