# TRACK SEEDING CUTS

MIRIAM DIAMOND

SEPTEMBER 13 2017

**github issue 126**

**(formerly “Three Point Helix Check error”)**

(my new helper  
for getting out  
of rabbit-holes)

# MAKING SEEDING CUTS GREAT AGAIN

- `org.lcsim.recon.tracking.seedtracker.FastCheck` ▶ `ThreePointHelixCheck` at triplet-finding stage: current code doesn't actually cut out any seeds

- For each of the 3 hits, calculates contribution to z error

```
dztot += _nsig * Math.sqrt(hit.getCovMatrix()[5]);
```

lcsim z(hps y)

- Then 

```
// Add multiple scattering error here - for now, just set it to 1 mm  
dztot += 1.; dztot += _nsig * MSError;
```

- Compares *total z error* to (*predicted – actual*) z position of middle hit

```
if (Math.abs(zpred - z[1]) > dztot) return false;
```

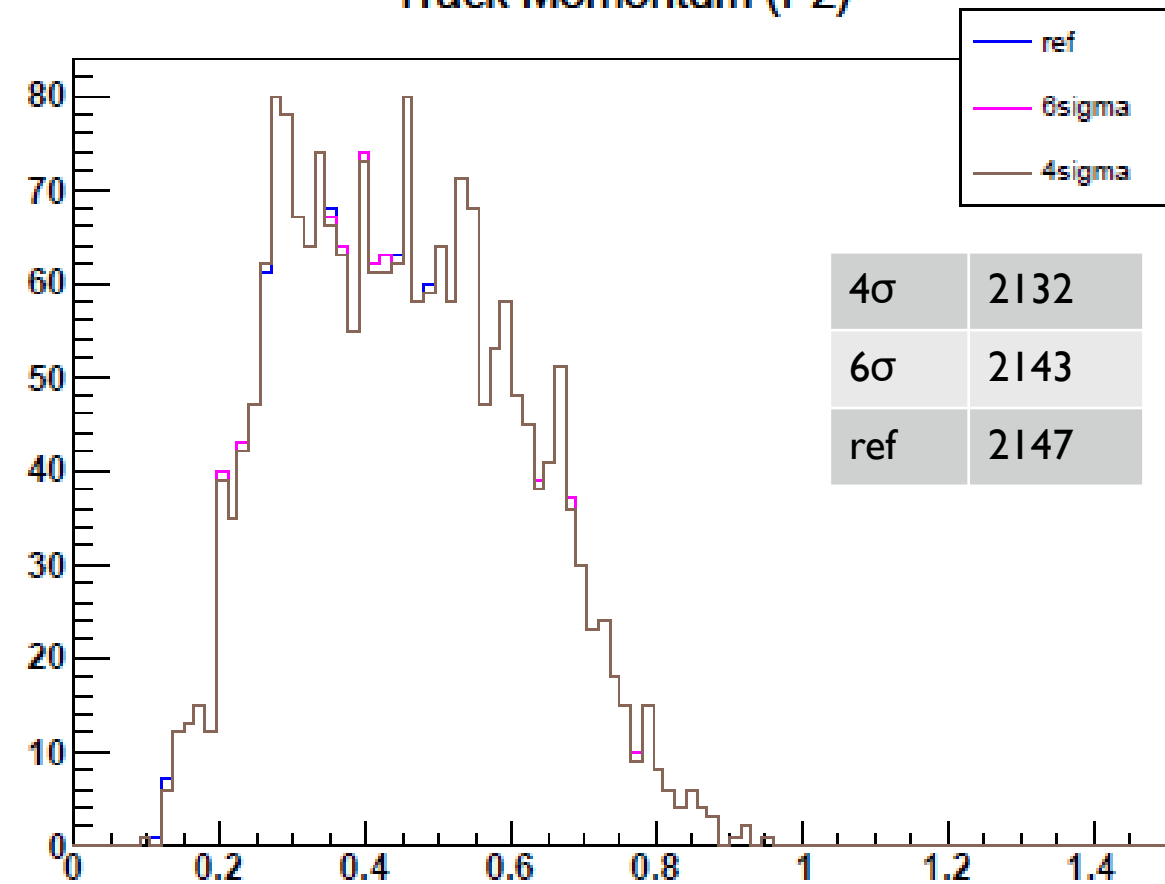

currently never happens

- Could skip the check (to still keep all seeds), or use seeding cuts with proper
  - Hit contribution to z error (value from un-corrected covariance matrix is too big)
  - MSError function
  - Value of `_nsig` (default was 10)
  - Addition of hit contributions and MSError in quadrature (not linearly)
