the difference is just adding the parameter D to the star patterns to allow for assymmetric patterns (to compensate for assymmetric heaters)

system of equations to determine;

for SE:

$$A = 14.3$$

$$D = 12.95$$

$$B = 12.6$$

$$C = 13.93$$

for Araldite:

$$A = 17.18$$

$$D = 15.55$$

B,C are not needed
