

# SAFETY DATA SHEET

## 1. Identification

Product identifier	Beryllium Solid		
Other means of identification			
SDS number	M10		
CAS number	7440-41-7		
Synonyms	Metallic Beryllium, Glucinium, I220H, IF-1®, S200F, S200FH, S200FC, SR200, S65, PS-200®, PF10, PF-60®, O-30, O-30H, I-70, I-70H, UHP Beryllium, .9999 Beryllium, B-26D, Be, IS-50M®		
Manufacturer/Importer/Supplier/D Manufacturer	istributor information		
Company name Address	Materion Brush Inc. 6070 Parkland Boulevard Mayfield Heights, OH 44124 United States		
Telephone	1.800.862.4118		
Website	www.materion.com		
E-mail	ehs@materion.com		
Contact person	Theodore Knudson		
Emergency phone number	1.800.862.4118		
2. Hazard(s) identification			
Physical hazards	Not classified.		
Health hazards	Carcinogenicity	Category 1	
	Specific target organ toxicity, repeated exposure	Category 1 (Respiratory system)	
Environmental hazards	Not classified.		
OSHA defined hazards	Not classified.		
Label elements	•		
Signal word	Danger		
Hazard statement	May cause cancer by inhalation. Causes dat prolonged or repeated exposure by inhalatio	mage to organs (respiratory system) through on.	
Precautionary statement			
Prevention	and understood. Minimize dust generation a thoroughly after handling. Do not eat, drink o	ot handle until all safety precautions have been read nd accumulation. Do not breathe dust/fume. Wash or smoke when using this product. Contaminated work place. Wear protective gloves/protective clothing/eye uate ventilation wear respiratory protection.	
Response	for breathing. If exposed or concerned: Get	ed: Remove person to fresh air and keep comfortable medical advice/attention. If skin irritation or rash eriencing respiratory symptoms: Call a poison before reuse.	
Storage	Store locked up.		
Disposal	Dispose of contents/container in accordance with local/regional/national/international regulations.		

None known.

Exposure to the elements listed in Section 3 by inhalation, ingestion, and skin contact can occur when melting, casting, dross handling, pickling, chemical cleaning, heat treating, abrasive cutting, welding, grinding, sanding, polishing, milling, crushing, or otherwise heating or abrading the surface of this material in a manner which generates particulate.

For further information, please contact the Product Stewardship Department at +1.800.862.4118.

### 3. Composition/information on ingredients

Substances

Chemical name	Common name and synonyms	CAS number	%	
Beryllium	Metallic Beryllium, Glucinium, I220H, IF-1®, S200F, S200FH, S200FC, SR200, S65, PS-200®, PF10, PF-60®, O-30, O-30H, I-70, I-70H, UHP Beryllium, .9999 Beryllium, B-26D, Be, IS-50M®	7440-41-7	100	
4. First-aid measures				
Inhalation	If symptoms develop move victim to fresh air. For Breathing difficulty caused by inhalation of partice breathing has stopped, perform artificial respiration	ulate requires immediate rei		
Skin contact	Take off contaminated clothing and wash before reuse. Thoroughly wash skin cuts or wounds to remove all particulate debris from the wound. Seek medical attention for wounds that cannot be thoroughly cleansed. Treat skin cuts and wounds with standard first aid practices such as cleansing, disinfecting and covering to prevent wound infection and contamination before continuing work. Obtain medical help for persistent irritation. Material accidentally implanted or lodged under the skin must be removed.			
Eye contact	Immediately flush eyes with plenty of water for at least 15 minutes, lifting lower and upper eyelids occasionally. Get medical attention if symptoms persist.			
Ingestion	If swallowed, seek medical advice immediately and show this container or label. Induce vomiting immediately as directed by medical personnel. Never give anything by mouth to an unconscious person.			
Most important symptoms/effects, acute and delayed	May cause allergic skin reaction. Prolonged expo	osure may cause chronic eff	ects.	
Indication of immediate medical attention and special treatment needed	Treatment of Chronic Beryllium Disease: There is beryllium disease. Prednisone or other corticoste available. They are directed at suppressing the i diminishing signs and symptoms of chronic beryll had only partial or minimal effectiveness, other in cyclophosphamide, cyclosporine, or methotrexate effects of all the immunosuppressive medications should be used only under the direct care of a ph steroids or bronchodilators, may be prescribed by selected cases. ## 5 Fire-fighting measures

5. Fire-fighting measures	
Suitable extinguishing media	The product is non-combustible. Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.
Unsuitable extinguishing media	Do not use water to extinguish fires around operations involving molten metal due to the potential for steam explosions.
Specific hazards arising from the chemical	Not applicable.
Special protective equipment and precautions for firefighters	Firefighters should wear full protective clothing including self contained breathing apparatus. Wear suitable protective equipment.
Fire fighting equipment/instructions	Move containers from fire area if you can do so without risk. Water runoff can cause environmental damage.
Specific methods	Pressure-demand self-contained breathing apparatus must be worn by firefighters or any other persons potentially exposed to the particulate released during or after a fire.
6. Accidental release measu	ires
Personal precautions, protective equipment and emergency procedures	In solid form this material poses no special clean-up problems. Wear appropriate protective equipment and clothing during clean-up.
Methods and materials for containment and cleaning up	Clean up in accordance with all applicable regulations.
Environmental precautions	Avoid release to the environment. In the event of a spill or accidental release, notify relevant authorities in accordance with all applicable regulations. Prevent further leakage or spillage if safe to do so. Avoid discharge into drains, water courses or onto the ground.
7. Handling and storage	
······································	

Precautions for safe handling Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Minimize dust generation and accumulation. Do not breathe dust/fume. Wear protective gloves/protective clothing/eye protection/face protection. Wear respiratory protection. Wash thoroughly after handling. When using, do not eat, drink or smoke. Contaminated work clothing must not be allowed out of the workplace.

Conditions for safe storage, Keep locked-up. Avoid contact with acids and alkalies. Avoid contact with oxidizing agents. including any incompatibilities

### 8. Exposure controls/personal protection

iological limit values	No biological exposure limits noted for the ingredient(s).	
xposure guidelines	Based on joint research conducted with the National Institute for Occupational Sa (NIOSH), Materion adopted an 8 element Beryllium Worker Protection Model (BW includes the use of a recommended exposure guideline (REG) for airborne berylli as a time-weighted average (TWA) limit for an 8-hour work day. Subsequent NIC shown that the BWPM has reduced but not eliminated the risk of beryllium sensiti chronic beryllium disease (CBD) in workers. Information on the BWPM can be fo www.berylliumsafety.com or by contacting Materion at +1 800.862.4118. In Janu issued a comprehensive occupational health standard for beryllium which include Exposure Limit (PEL) of 0.2 $\mu$ g/m3 as an 8-hour TWA. In its evaluation, OSHA co "despite the reduction in risk expected with the new PEL, the risks of CBD and ca with average exposure levels of 0.2 $\mu$ g/m3 are still clearly significant." (Preamble Occupational Exposure to Beryllium, Docket #OSHA-H005C-2006-0870, at 316.) Materion recommends that beryllium users not only comply with the OSHA Berylli carefully apply all elements of the BWPM, but reduce airborne exposures to the lo level.	
	that has developed guidelines for all li ACGIH® states that "Threshold Limit " under which ACGIH® believes that ne	nental Industrial Hygienists (ACGIH®) is a scientific body sted substances. In its development documents, the Values and Biological Exposure Indices represent conditions early all workers may be repeatedly exposed without adverse between safe and dangerous exposures, nor are they a
		ntified and shown to increase an individual's susceptibility to etect those genetic factors in individuals.
Appropriate engineering controls	should be matched to conditions. If an or other engineering controls to maintain the second s	ly in confined areas. air changes per hour) should be used. Ventilation rates plicable, use process enclosures, local exhaust ventilation, ain airborne levels below recommended exposure limits. If shed, maintain airborne levels to an acceptable level.
	preferred method of controlling exposition the ventilation system must be position generation. Avoid disruption of the air a man-cooling fan. Check ventilation e	xhaust ventilation or other engineering controls is the ure to airborne particulate. Where utilized, exhaust inlets to ned as close as possible to the source of airborne flow in the area of a local exhaust inlet by equipment such as equipment regularly to ensure it is functioning properly. tion of ventilation to all users. Use qualified professionals to

#### **Control parameters**

VENTILATION: Good general ventilation (typically 10 air changes per hour) should be used. Ventilation rates should be matched to conditions. If applicable, use process enclosures, local exhaust ventilation, or other engineering controls to maintain airborne levels below recommended exposure limits. If exposure limits have not been established, maintain airborne levels to an acceptable level.

Whenever possible, the use of local exhaust ventilation or other engineering controls is the preferred method of controlling exposure to airborne particulate. Where utilized, exhaust inlets to the ventilation system must be positioned as close as possible to the source of airborne generation. Avoid disruption of the airflow in the area of a local exhaust inlet by equipment such as a man-cooling fan. Check ventilation equipment regularly to ensure it is functioning properly. Provide training on the use and operation of ventilation to all users. Use qualified professionals to design and install ventilation systems.

WET METHODS: Machining operations are usually performed under a liquid lubricant/coolant flood which assists in reducing airborne particulate. However, the cycling through of machine coolant containing finely divided particulate in suspension can result in the concentration building to a point where the particulate may become airborne during use. Certain processes such as sanding and grinding may require complete hooded containment and local exhaust ventilation. Prevent coolant from splashing onto floor areas, external structures or operators' clothing. Utilize a coolant filtering system to remove particulate from the coolant.

WORK PRACTICES: Develop work practices and procedures that prevent particulate from coming in contact with worker skin, hair, or personal clothing. If work practices and/or procedures are ineffective in controlling airborne exposure or visual particulate from deposition on skin, hair, or clothing, provide appropriate cleaning/washing facilities. Procedures should be written that clearly communicate the facility's requirements for protective clothing and personal hygiene. These clothing and personal hygiene requirements help keep particulate from being spread to non-production areas or from being taken home by the worker. Never use compressed air to clean work clothing or other surfaces.

Fabrication processes may leave a residue of particulate on the surface of parts, products or equipment that could result in employee exposure during subsequent material handling activities. As necessary, clean loose particulate from parts between processing steps. As a standard hygiene practice, wash hands before eating or smoking.

HOUSEKEEPING: Use vacuum and wet cleaning methods for particulate removal from surfaces. Be certain to de-energize electrical systems, as necessary, before beginning wet cleaning. Use vacuum cleaners with high efficiency particulate air (HEPA). Do not use compressed air, brooms, or conventional vacuum cleaners to remove particulate from surfaces as this activity can result in elevated exposures to airborne particulate. Follow the manufacturer's instructions when performing maintenance on HEPA filtered vacuums used to clean hazardous materials.

#### Individual protection measures, such as personal protective equipment

Eye/face protection	Wear approved safety glasses, goggles, face shield and/or welder's helmet when risk of eye injury is present, particularly during operations that generate dust, mist or fume.
Skin protection	
Hand protection	Wear gloves to prevent contact with particulate or solutions. Wear gloves to prevent metal cuts and skin abrasions during handling.
Other	Protective overgarments or work clothing must be worn by persons who may become contaminated with particulate during activities. Skin contact with this material may cause, in some sensitive individuals, an allergic dermal response. Particulate that becomes lodged under the skin has the potential to induce sensitization and skin lesions.

Respiratory protection	When airborne exposures exceed or have the potential to exceed the occupational exposure limits, approved respirators must be used as specified by an Industrial Hygienist or other qualified professional. Respirator users must be medically evaluated to determine if they are physically capable of wearing a respirator. Quantitative and/or qualitative fit testing and respirator training must be satisfactorily completed by all personnel prior to respirator use. Users of tight fitting respirators must be clean shaven on those areas of the face where the respirator seal contacts the face. Use pressure-demand airline respirators when performing jobs with high potential exposures such as changing filters in a baghouse air cleaning device.
Thermal hazards	Not applicable.
General hygiene considerations	Handle in accordance with good industrial hygiene and safety practice.

## 9. Physical and chemical properties

## Appearance

Physical state	Solid.
Form	Various shapes.
Color	Grey
Odor	None.
Odor threshold	Not applicable.
рН	Not applicable
Melting point/freezing point	2348.6 °F (1287 °C)
Initial boiling point and boiling range	5378 °F (2970 °C)
Flash point	Not applicable
Evaporation rate	Not applicable.
Flammability (solid, gas)	Not available.
Upper/lower flammability or explos	sive limits
Explosive limit - lower (%)	Not applicable.
Explosive limit - upper (%)	Not applicable.
Vapor pressure	6.67 hPa estimated
Vapor density	Not applicable
Relative density	Not applicable.
Solubility(ies) Solubility (water)	Not applicable.
Partition coefficient	Not available.
(n-octanol/water)	
Auto-ignition temperature	Not applicable.
Decomposition temperature	Not applicable.
Viscosity	Not applicable.
Other information	
Density	1.85 g/cm3 2 estimated
Molecular formula	Ве
Molecular weight	9.01 g/mol
Specific gravity	1.85 estimated
10. Stability and reactivity	
Reactivity	The product is stable and non-reactive under normal conditions of use, storage and transport.
Chemical stability	Material is stable under normal conditions.
Possibility of hazardous reactions	Hazardous polymerization does not occur.
Conditions to avoid	Avoid dust formation. Contact with acids. Contact with alkalis.

Incompatible materials	Strong acids, alkalies and oxidizing agents.		
Incompatible materials			
Hazardous decomposition products	No hazardous decomposition products are known.		
11. Toxicological informatio	n		
Information on likely routes of exp	osure		
Inhalation	May cause damage to organs (respiratory system) through prolonged or repeated exposure.		
Skin contact	Not likely, due to the form of the product.		
Eye contact	Not likely, due to the form of the product.		
Ingestion	Not likely, due to the form of the product.		
Symptoms related to the physical, chemical and toxicological characteristics	Respiratory disorder.		
Information on toxicological effects	S		
Acute toxicity	Based on available data, the classification criteria are not met.		
Skin corrosion/irritation	Not likely, due to the form of the product.		
Serious eye damage/eye irritation	Not likely, due to the form of the product.		
Respiratory or skin sensitization			
Respiratory sensitization	May cause damage to organs (respiratory system) through prolonged or repeated exposure.		
Skin sensitization	Not a skin sensitizer.		
Germ cell mutagenicity	Due to lack of data the classification is not possible.		
Carcinogenicity	Cancer hazard.		
IARC Monographs. Overall E	valuation of Carcinogenicity		
Beryllium (CAS 7440-41-	-

Beryllium (CAS 7440-41-			
Reproductive toxicity	Not classified.		
Specific target organ toxicity -	Not classified.		
single exposure			
Specific target organ toxicity - repeated exposure	May cause damage to organs (respiratory system) through prolonged or repeated exposure by inhalation.		
Aspiration hazard	Due to lack of data the classification is not possible.		
Chronic effects	Hazardous by OSHA criteria. May cause damage to organs through prolonged or repeated exposure.		
Further information	Symptoms may be delayed.		
12. Ecological information			
Ecotoxicity	No ecotoxicity data noted for the ingredient(s).		
Persistence and degradability	No data is available on the degradability of this product.		
Bioaccumulative potential	Not available.		
Mobility in soil	Not available.		
Other adverse effects	Not available.		

## 13. Disposal considerations

Disposal instructions	Material should be recycled if possible. Disposal recommendations are based on material as supplied. Disposal must be in accordance with current applicable laws and regulations, and material characteristics at time of disposal. When this product as supplied is to be discarded as waste, it does not meet the definition of a RCRA waste under 40 CFR 261.
Waste from residues / unused products	Empty containers or liners may retain some product residues. This material and its container must be disposed of in a safe manner (see: Disposal instructions).
Contaminated packaging	Empty containers should be taken to an approved waste handling site for recycling or disposal. Since emptied containers may retain product residue, follow label warnings even after container is emptied.
