Controls SW Group Meeting

March 14, 2024

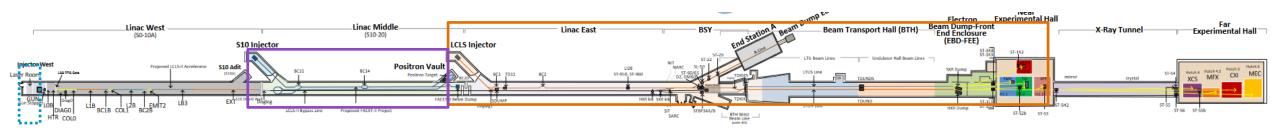

Agenda

1. Machine Recovery 2. Upcoming Schedule 3. Discussion: Power Outage Resilience and Recovery Improvement

State of the Accelerators

- LCLS-SC
 - Cryoplant recovery complete, linac at 2K. Resume commissioning program target today to start turning on RF and restarting the injector. Plan for beam to BSYD tomorrow during day shift.
- FACET Beam running to users
- LCLS-Cu/NC Beam running to users
- SPEAR Beam running to users
- UED Beam running to users
- NLCTA Startup scheduled for Monday

Upcoming downtime periods

This week's PAMM was cancelled

- Next all-linac PAMM is March 26-28
 - Jobs likely due Monday March 18th
 - Area manager/CD planning meeting Tuesday 19th
 - Official job review meeting Thursday 9 am

- Time to start thinking about the summer downtime
 - It's probably only 2 or 3 power outages away! :D

Typical PAMM schedule

Plan for rollout of RTEMS NFS/autosave issue

This issue is causing downtime for Operations – they've made it a very high priority to fix.

- Had a planning meeting yesterday for implementing the fix described a few weeks ago in this meeting by TID Jeremy Lorelli.
- Fix is well tested on 6100s, has everything built for other rtems platforms: 3100, coldfire
 - We should look if any softiocs on the daemons are failing
 - Why issue now, worse in last few months? Or do we just see it because the unstable power?
- If all goes well, we'll plan to roll it out to many systems this next PAMM
 - Worst offenders are LLRF and MPS, but since Shantha and Jeremy are on vacation, Sonya has offered to test the update on the other platforms using BPM IOCs each next week.

How to make autosave file on demand with channel watcher (thanks Mike)!

How to find list of IOCs currently not able to write to save file (similar for FACET)

Discussion

Review of power outage recovery issues and planning for improved resiliency in the future.
