

The optical monitoring of the bright gamma-ray blazars by GRT

T. Sakamoto, D. Donato, N. Gehrels, T. Okajima, C. A. Wallace

Abstract

We present the optical light curves of 20 bright gamma-ray blazars monitored by Goddard Robotic Telescope (GRT) during the first year of operation. All these sources are monitored by LAT. For all the blazars, we collect the light curves at different wavelengths to investigate possible correlations. We will present the results of blazars which have a good time coverage in the light curves.

Goddard Robotic Telescope (GRT)

Equipment

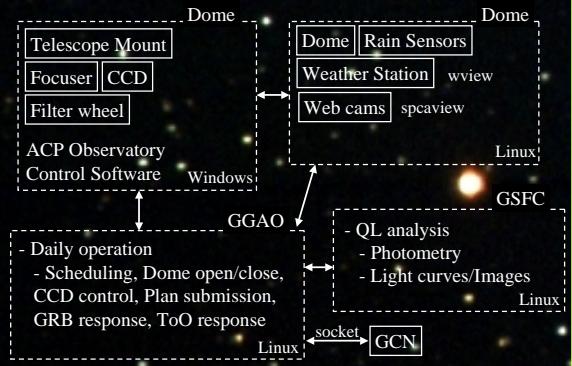

Specification

- FOV: 20' x 20'
- Filters: U,V,B,R,I,Clear
- Limiting mag: R~19 mag @ 10 min. (3 sigma)
- Location: Goddard Geophysical and Astronomical Observatory (GGAO; ~2 mile NE of GSFC)

System

GRT Gamma-ray Blazars Monitor

List of Monitoring Blazars

Data Analysis

- B, V, R, and I filters in 60 second exposures.
- Bias, dark and flat field (sky flat) corrections (pyraf).
- Source extraction in images (sextractor).
- Aperture photometry in a radius of 5'' (pyraf).
- Relative photometry using three comparison stars from the catalog (e.g. AAVSO high energy network) in the field.
- The measured magnitude of the comparison star has to be within 0.05 mag of the catalog magnitude (otherwise blazar's data point will be excluded).
- The Swift/XRT data are from "Swift-XRT Monitoring of Fermi-LAT Source of Interest" website: <http://www.swift.psu.edu/monitoring/>
- The Fermi/LAT data are from "Monitored Source List Light Curves" website at Fermi/SSC: http://fermi.gsfc.nasa.gov/ssc/data/access/lat/msl_lc/ (Only showing the Fermi/LAT data with the upper limit flag == F)
