

The author list for HPS publications describing the full experiment and its physics results will consist of HPS collaboration members in good standing who have contributed to the design, construction, and operation of the apparatus; run shifts; and participated in analyzing the data and publishing HPS physics results.

Those collaboration members who are engineers, computer scientists, and technical personnel are not required to have run shifts on HPS or analyzed data, but are expected to have been available to support detector operations during commissioning and data taking.

Those collaborators who are physicists are expected to have run shifts and ideally to have contributed in other ways as well.
