

Storage Resource Broker SRB

Transparent access to heterogeneous
resources across a network

Don't need to know where file is
or what type of storage/OS is used

SRB: client server middleware

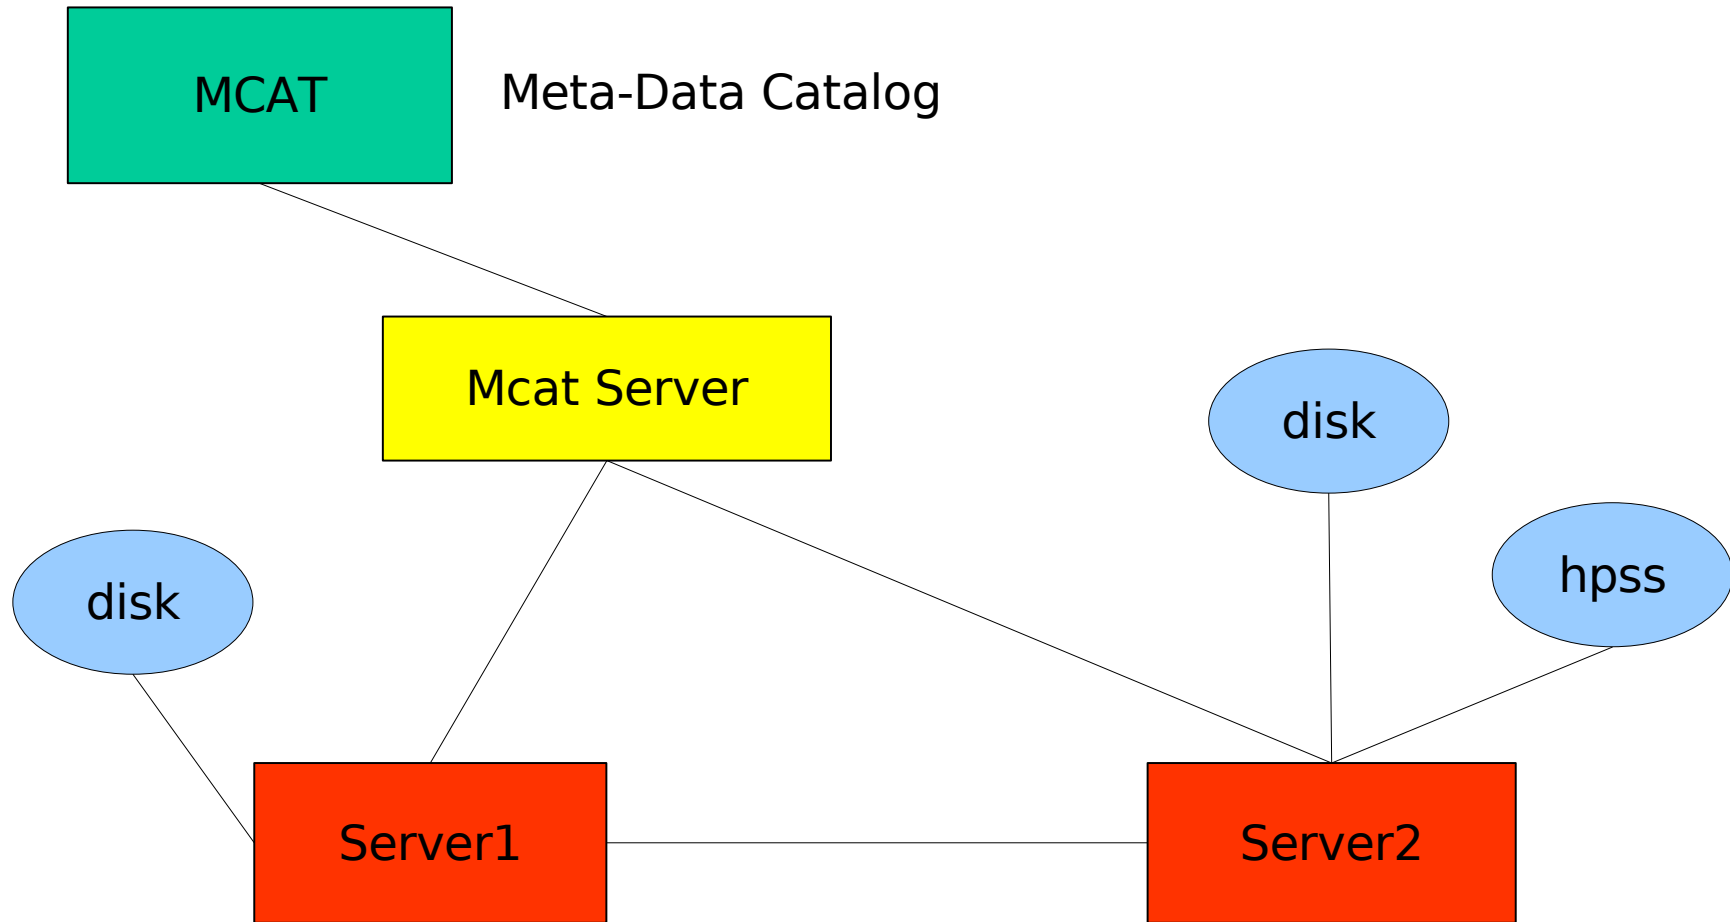

- Global logical name space
- Unix like directory structure
- Mapping of logical name to physical properties:

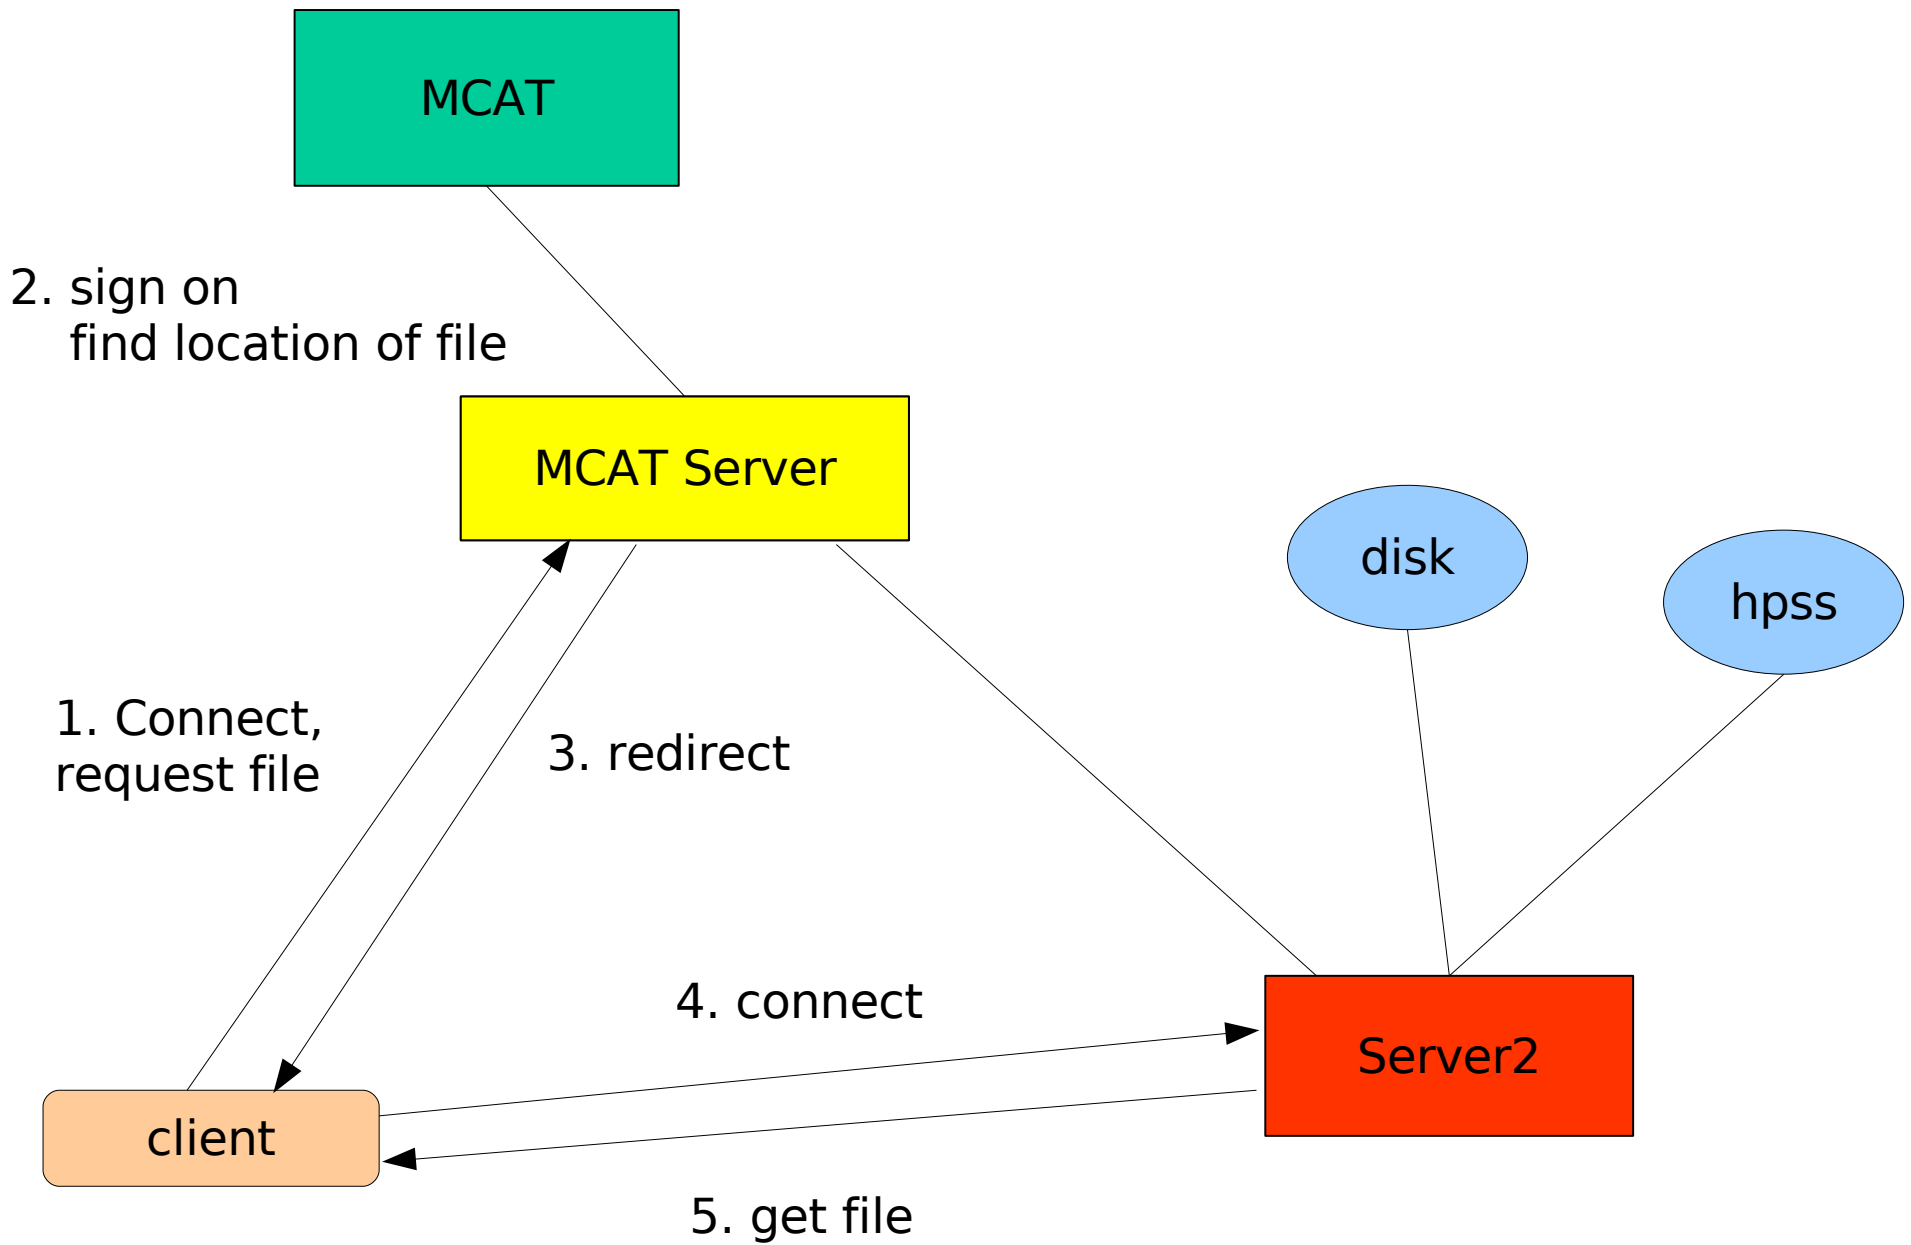

host, physical path

- Single sign on
- Access control

Meta Data Catalog (MCA) keeps all the information

SRB Zone

- Files are stored in Resources
- Physical Resources can be grouped into logical Resources
- Replication of files between resources
- Parallel stream file transfer
- Bulk operations

- Different ways to connect to SRB:
 - C-api
 - Python/Perl wrappings for C-api
 - Java
 - Web (based on cgi,java)
 - Command line (S-commands)
