

SVN DBD Editing Howto for Linux

This pages summarizes a typical SVN session

1. Bring your local version in sync with the repository

```
svn update
```

2. Do your editing work
3. Check if it compiles
Please Always check this !
4. Commit your changes
go to the Main directory

```
svn commit
```

it will ask you for a commit message, please state some details what you've done, e.g. added section, etc.

5. do an update
