

# Externals Upgrade 2012

## ROOT v5.34

Currently looking at v5.34.03

Trouble in System tests - all of the tests are taking longer to execute. Particular in the ROOT Analysis step, not in actually running Gleam. Some of the runs time out in the xlong queue.

For tests v20r7p0-rc4, the following tests timed out: VerticalGamma100MeV, VerticalGamma1GeV, VerticalMuon1GeV, VerticalProton1GeV, <http://glast-ground.slac.stanford.edu/SystemTests/?releaseVersionId=14021>

Looking at the times for the other runs:

Name	Total Time	MB	GR Time	v20r6p4 Tot Time	MB	v20r6p4 GR Time
AllGamma	36104 sec (601 min)	1776	160 min	10697 sec (178 min)	1632	166 min
VerticalGamma10GeV	14284 sec (238 min)	1461	158 min	11549 sec (192 min)	1366	187 min

It would appear we are getting stuck in the Root Analysis portion of the tests.

All of the failed runs had completed their GR simulations, so the ROOT files were available. Repeated the ROOT Analysis step, stand alone, using the same version of ROOT, and all the system tests scripts and submitting to the same machine (fell) that was used originally. All the runs failed to complete in the time allotted to the xlong queue.

## Comparing the results of running ROOT's stress test between v5.34.03 and v5.26

```
heather@yakut14 $ root -b \

```

There doesn't seem to be anything intrinsically slower about v5.34.03.

## Trying a fresh rebuild of v5.34.03 on rhel5-32

No Difference

## Running a "read-only" job without filling histograms

This runs quite smoothly and quickly - so likely the issue is not with reading/writing, but rather some other aspect of the scripts

## Re-running tests in xxl queue

In preparation for the next GR release, it would be nice to have a complete set of system tests results, I think xxl will allow all the tests to complete. This required a small tweak to use "xxl" from "xlong" in \$SYSTESTS/src/exec/runSystests\_SCons.pl

## Building systest scripts via ACLIC

The system tests scripts have been historically run via the interpreter. To enable more debugging and to perhaps speed and clean things up. Work has started to build the RootTreeAnalysis used in the system via ACLIC. A number of errors and oddities are being fixed in the hopes that this might speed things up again.

Required some tweaks to reconRootData includes...still having trouble getting the RootTreeAnalysis class recognized after the shared library is created.
