

# Offline User of eLog etc Jun 8

Present: TonyJ, Eduardo, Benoit, Richard, Anders

I have contacted Ric for his thoughts on eLog. He has been gearing up to have a BTeLog, but agrees support for it is minimal at present with other pressures.

## eLog

For various reasons, we think the current eLog is not ideal for future offline use, notably it being a perl/cgi app, whereas the offline webbery is JSP now. Also, Eduardo expressed the opinion that it is not that great for offline use.

We will try to make use of the soon-to-come Dataset Catalogue, and so we need metadata for the runs. Anders agreed to identify what items we need and where we can hope to find them. Hopefully it will result in a form the pipeline can parse and then update the catalogue.

## Web interface

Tony would start from the BT99 web interface that Karen wrote and go from there.
