# 20130507 - Syria offline 20 hours May 7-8

We have two active hosts being monitored in Syria. One is run by an ISP (www.inet.sy), the other by a publishing company (www.thawraonline.sy) .

They both were seen back up at 14:37 GMT today. They both were seen not responding at 19:08 May 7 GMT

Subject: syria

if you're monitoring syria, apparently they went offline again ~noon.

another red block in your graphs if you're interested.

Yee.
