task description and user supplied batch options

I notice there is no place in the task table for a description of the task. Would be nice.

Also, it could be useful to allow the user to add options to the bsub command. One that comes to mind immediately is the -R option. One might be willing to trade time waiting for a job to start for the x2-3 gain in CPU between the barb and noma batch workers.

Of course both would have to be configurable from the web front end.
