

GlastRelease v14r10

[Run Manager Summary](#)

[System Tests v14r10](#)

System Tests Report Summary

This is a candidate for the L1 Production Branch now, and so the default comparison is made to recent L1 branch tag [v13r11p9](#) (A comparison to v14r9, the previous main branch release, shows no differences.)

The comparison reveals differences that have been previously understood and found acceptable relating to

- Changes to the statistical sample of MC input events (see reports for [GR v13r13](#))
- ACD fixes (see reports for [v14r4](#) and [v14r8](#))
- EbfWriter option to pass events without a trigger bit (see report for [v14r7](#))

Changes

Many. Some highlights include

- ACD ribbon attenuation, suppression fix, and pile-up fix
- Updates to the CAL code
- EbfWriter update with new job option ReqGemTrig
- Fix for duplicate events in merit
- Pass 6
- DFI 3-4-5 updates
