

TrackingCheater

TrackingCheater

For each [SimTrackerHit](#) in charged tracking devices, the **TrackingCheater** finds the [MCParticle](#) giving rise to the hits and creates a corresponding [CheatTrack](#). It uses the MCParticle's momentum vector to provide the track momentum required to satisfy the [FoundTrack](#) (and Track) interface.

The **TrackingCheater** finds combined tracks in all tracking devices that have SimTrackerHit's from the same MCParticle. The [CombinedTrack](#) object is similar to the CheatTrack except that it has additional methods to add and get CheatTracks from its internal list.

To add the TrackingCheater to a process, use

```
add(new org.lcsim.recon.ztracking.cheater.TrackingCheater());
```

To access tracks use `event.get(CombinedTrack.class)`.

The **TrackingCheater** classes are divided into the following packages.

Packages:	Classes:
<i>org.lcsim.recon.ztracking</i>	FoundTrack
<i>org.lcsim.recon.ztracking.cheater</i>	TrackingCheater
	CheatTrack
	CombinedTrack
