

Redispatching runs to the pipeline

In some rare cases the pipeline may not receive the runs sent through FASTCopy. In order to redispatch these runs the following needs to be done:

- In `lat-dmz01:/nfs/data/DVD` locate the gzipped tarballs for the runs.
- Move them to `/nfs/data/LICOS`
- In `/tmp/licos-export.log` observe that the runs are processed by FASTCopy.
