

University of Peshawar

Fahad set up www.upesh.edu.pk as a PingER monitoring host in April 2010. PingER monitors www.upesh.edu.pk with the results shown below:
Source "pinger.slab.stanford.edu" To Destination "www.upesh.edu.pk"

Its reachability seems good. The web page to gather the data from (at http://www.upesh.edu.pk/cgi-bin/ping_data.pl) responds correctly but there has been no data available. I tested this using [getdata_all.pl](#) and it was able to connect to the host, but there was no data available for april 21-24, 2010. There appear to be no nodes to monitor in [pinger.xml](#)
