

Massimiliano Turri

Max has been working at SLAC since 2001, developing tools for data mining and visualization.

In 2005 he joined the Fermi Data Handling group to develop a framework for web-based applications to allow Fermi collaborators to access data from anywhere in the world.

He is currently working on generalizing this framework, making it available to other experiments, like EXO and CDMS.

Max got his Master in Physics from Milan's University in 1996 followed by a PhD from UCSC in 2001. Since then he has been working at SLAC as a software developer.
