Starting the LCLS Home Screen Mac

Starting the LCLS Home Screen from Mac OS X

This page provides instructions for logging in to the LCLS control system on a computer running Mac OS X. Instructions for Windows Users click here or Linux Users click here.

For special instructions on how to bring up the LCLS Home screen on a CUD click here.

For first time users, click here for configuration information.

Conventions

$ represents the command line prompt. Type the text to the right of the $ on the command line.

Starting the LCLS Home Screen

If you do not have X11 installed on your computer, see Installing X11.

Double click on X11.app found in /Applications/Utilities/

X11.app

Starting the LCLS Home Screen

Login to lcls-prod02 with

```
$ ssh -X username@lcls-prod02.slac.stanford.edu
```

At the prompt on lcls-prod02, type

```
ssh physics@lcls-srv01
```

or

```
ssh lclsops@lcls-srv01
```

or

```
ssh acclegr@lcls-srv01
```

depending on which group account you were added to in Step 2 above. If you see a prompt for a password, something went wrong, and you need to contact Ken Brobeck.

Development System

Login to lcls-dev2 with

```
$ ssh -X -Y username@lcls-dev2.slac.stanford.edu
```

Find out what shell you are running by typing `echo $SHELL`. Your shell will be either `tcsh` or `bash`.
ex:

```
$ echo $SHELL
/bin/bash
```

I am running `bash`.

If you are using `tcsh`, type this commend to enter the bash shell before proceeding:

```
$ bash
```

If you are using `bash`, type this command:

```
$ source /nfs/slac/g/lcls/build/epics/setup/epicsSetup.bash
```

And start up the lcls home screen by typing:

```
$ lclshome
```
