

SCS bullet points for week ending 2013-10-25

Wei Yang (Scientific Computing Services), with support from Andrew Hanushevsky and Richard Mount (Scientific Computing Applications), published a paper at CHEP2013 on "Using Solid State Disk Array as a Cache for LHC ATLAS Data Analysis". It described the cache architecture and its positive impact on ATLAS data analysis, which also improves SLAC's batch system utilization.

Scientific Computing Services updated the webauth login pages in support of the Drupal project. This new, improved version provides a consistent interface for SLAC web services.
