SCS bullet points for week ending 2013/12/13

Scientific Computing Services provisioned 175 Terabytes of additional NFS storage for the Dark Energy Survey group (DES).

Scientific Computing Services has upgraded from OpenAFS 1.6.1 to 1.6.5 on Red Hat Enterprise 6, which provides the SLAC community with the latest stable version of AFS that addresses some known bugs.

Scientific Computing Services is now running LSF version 9.1.1.1 in a test environment. This release provides new features which may benefit MPI users.
