ana-0.11.1

Important notes:

- As of this release we will no longer support new data types in the old **pyana** analysis framework. Users are advised to switch to the **psana** framework which provides similar capabilities as the old one. Please see Migration from pyana for mode details.
- The old HDF5 translator application **o2o-translate** is no longer supported as of this release. It's been replaced with the new psana-based translator explained at Outdated: The XTC to HDF5 Translator manual.

New features and improvements:

New data types in XTC:

- epix10k

Calibration Manager:

- Add persistent intensity range in image viewer

Bugs fixed:

- Fixed problems with Doxygen documentation generation in a number of packages
