

# Tools-Server

Tools-Server is a set of perl modules and script to automate the testing of real networked systems. It encompasses a flexible modular architecture and flexible user-definable test configs that enable the sweeping and iteration of performance measurements between hosts.

it is available via AFS CVS @ [/afs/slac.stanford.edu/g/scs/net/netmon/repo](afs://slac.stanford.edu/g/scs/net/netmon/repo) via module tools-server.
