

Workbook

[Expand all](#) [Collapse all](#)

This area in Confluence is meant to be used to create new and updated content for the [workbook](#). The original workbook will then point to these pages as needed. The intent is to retain the same hierarchy to mimic the structure in the workbook, in the hopes that will keep the pages organized and easier to maintain in parallel. If you need to create a new page, please contact Heather Kelly (heather@slac.stanford.edu).
