

# Confluence outage tonight (2 Dec 2014) 1730 to 1800 PST

Confluence can no longer synchronize its user authorization data from crowd, so updates in crowd are no longer propagating to confluence. To correct this we need to disable the confluence/jira single-sign-on feature, which requires an outage. We plan to do that tonight at 5:30pm. Since this has been a recurring problem, we plan to leave **Confluence/JIRA single-sign-on disabled**. This may allow us to fix problems in the future without taking an outage. We expect to have confluence back in service by 6:00 pm.
