

IEPM Database Validation Scripts

The following scripts have been developed to create web pages of the content of the database tables. It is recommended that these scripts be run after adding records to the relevant database table to provide a look at how the entries were added and how they appear.

report-nodes

generates a [web page](#) which displays the [NODES](#) table elements. Note that not all fields are displayed due to security concerns.

report-toolspecs

generates a [web](#) page displaying the tool (probe) specifications from the [TOOLSPECS](#) table. Note that page contains all the specifications sorted by nodename first, and then after that they are sorted by probe type.

report-monhost

generates a web page
