

GlastRelease v15r13

[Run Manager Summary](#)

[System Tests v15r13](#)

System Tests Report Summary

GR v15r13 is the most recent in a flurry of releases aimed at a new L1 production tag.

None of these (GR v15r8 through GR v15r13) have shown any differences for comparison to [v15r6p1](#), the last L1 production release.

The system tests have several new plots added for new or renamed filter variables in the merit tuple (See Leon's presentation at the June 23 Daily Analysis Meeting [here](#)). (See [GR v15r10](#) for details of the new plots.) These plots do not appear for the comparison to v15r6p1, which does not have the new plots included. The new plots can be viewed by selecting a comparison between versions \geq GR v15r8.

Changes

- Numerous... highlights are for Moot configuration and calibration packages and updates for the OnbordFilter
- Reworking of Obf filter bits
