

GlastRelease v15r14

[Run Manager Summary](#)

[System Tests v15r14](#)

System Tests Report Summary

GR v15r14 is a candidate for L1 production (first new release post-activation).

The differences for comparison to [v15r13](#) are in plots for the Onboard filter status and state. The software changes are patches to the OnboardFilter package, so not too surprising. Filter states have in general shifted from leaks to vetos.

Changes

- OnboardFilter, IExternal/obf – patches to fix Hip status and allow reading of previous filter info.
