How do I run a file with Geant4 macro commands

There are two ways to run a file with Geant4 macro commands using slic.

First, a single non-option command line argument is treated as a macro.

```
slic run.macro
```

Secondly, the *-m* switch can be used one or more times to specify macros that will be executed in command line order.

```
slic -m init.macro -m run.macro
```
