[System Tests v15r20](#)

System Tests Report Summary

GR v15r20 is another step toward a new L1 production version.

No differences for comparison with [GR v15r19](#)

In brief the major issues to be resolved in order of impact on data analysis are

- disagreement between flight software and Onboard Filter versions of the filter status (ldf vs ebf formats)
- NaN values for RA and Dec for data taken in pointed mode
- failure to generate GCR tuple

Changes

- astro - rollback updates for the NaN problem (these were added in v15r19)
