

Fetching the RCE SDK (V1.0.0 or later)

Installation on Linux Host

The SDK contains support for 3 platforms:

1. arm-rtems-rceCA9 – target specific code for RTEMS
2. arm-linux-rceCA9 – target specific code for ArchLinux
3. i86-linux-64 – Host tools for 64-bit linux

To retrieve the SDK from SLAC, execute the following command on your host:

```
wget http://www.slac.stanford.edu/projects/CTK/SDK/rce-sdk-<tag>.tar.gz <install_path>

tar -xzf rce-sdk-<tag>.tar.gz <install_path>
```

This will place the **current** tag of the SDK into <install_path>

tag is of the format vx.y.z.
