

# RCE Reboot

Usage: `reboot_rce [-t <rtems|linux|ramdisk>] [-b <0|1>]`

Modify bootloader parameters and reboot system

Options:

- `-t|--target` Set the target operating system
- `-b|--bitload` Set the bitfile load directive

Example Usage:

Reboot into rtems and load the bitfile `/mnt/boot/fpga.bit`

```
reboot_rce -t rtems -b 1
```

Reboot into linux and do not load a bitfile (use default bitstream built into `boot.bin`)

```
reboot_rce -t linux -b 0
```
