

GlastRelease v15r29

[Run Manager Summary](#)

[System Tests v15r29](#)

System Tests Report Summary

No differences in the comparison with preceding main branch version, [GR v15r28](#).

Differences in comparison to [GR v15r24](#), the previous L1Proc version are as follows:

- Obf adjusted so that MIP Filter is properly handled for B1-0-8 flight software ([GRv15r25](#))
- Obf definition of filter state values matches Lsf defined enum for RsdState ([GRv15r28](#)).
Note that the Obf state redefinition (Grv15r28) does not address differences between Fsw and Obf treatment of the high pass filter.

Changes

digiRootData, RootIO, RootConvert - Updates for Obf. In the case of MC, fills the Fsw variables to match OnboardFilter. Add ObfFilterStatus method
GetState to return Lsf::RsdState

Gleam - Fixed Tkr JO for L1

G4Propagator - beaten into submission? Addresses JIRA GEANT-12

CalibSvc - close calib.root files, updates to job options test files.
