

How do I set the output path for LCIO files

The `-p` command line option sets the output directory where LCIO files will be created.

```
slic -g mygeom.lcdd -o output_events -p ./output_dir
```

In the above, the LCIO file will be created at the relative path `./output_dir/output_events`.

The corresponding command is `/lcio/path`.

```
/lcio/filename output_dir
```
