

How can I dump information about my LCIO file from the command line

LCIO includes the [LCIO Command Line Tool](#) at `$LCIO/bin/lcio`. Assuming that `$LCIO/bin` is in the PATH, this tool can be used to print information about your LCIO file.

```
lcio print outfile.slcio
```

Use the command

```
lcio print -h
```

for help on using the print command.
